EM 2040 Wideband multibeam

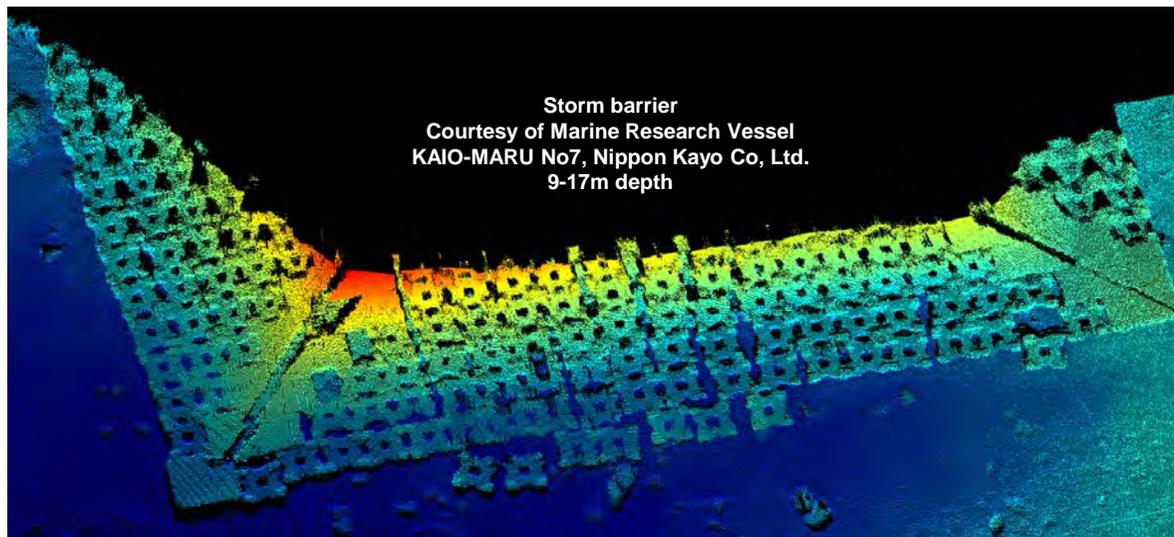

Helge Uhlen  
Product Sales Manager  
Kongsberg Maritime

# EM 2040 - Wideband Multibeam

## Why go for EM 2040 ?

- EM 2040 has the highest specification
- EM 2040 produces in real-time the cleanest data
- EM 2040 comply fully with S-44 special order and LINZ even in rough weather conditions
- EM 2040 is the first shallow water system to bring all advanced features of the deep water multibeam

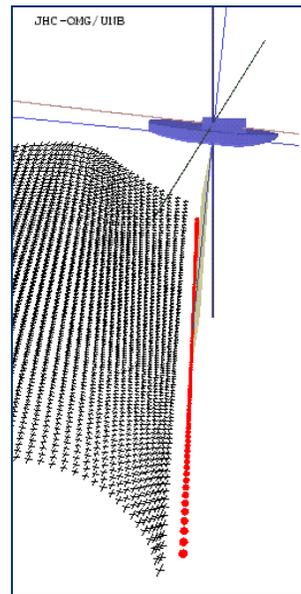

Raw data, 'no data cleaning required'

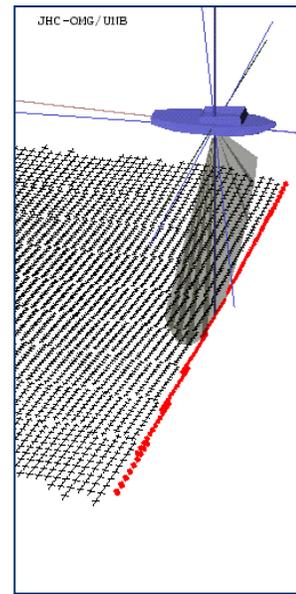

# EM 2040 – Wide Band Multibeam Survey requirements

In order to meet IHO S-44 requirements **in all weather conditions**, the following features are necessary:

- Real-time stabilization of TX/RX beam for yaw, pitch and roll movements
- Sector transmission for robust bottom detection
- Nearfield focusing on both transmit and receive
- Dual swath per ping to meet Special order at 8 knot (or increased survey speed)

*No stabilization*

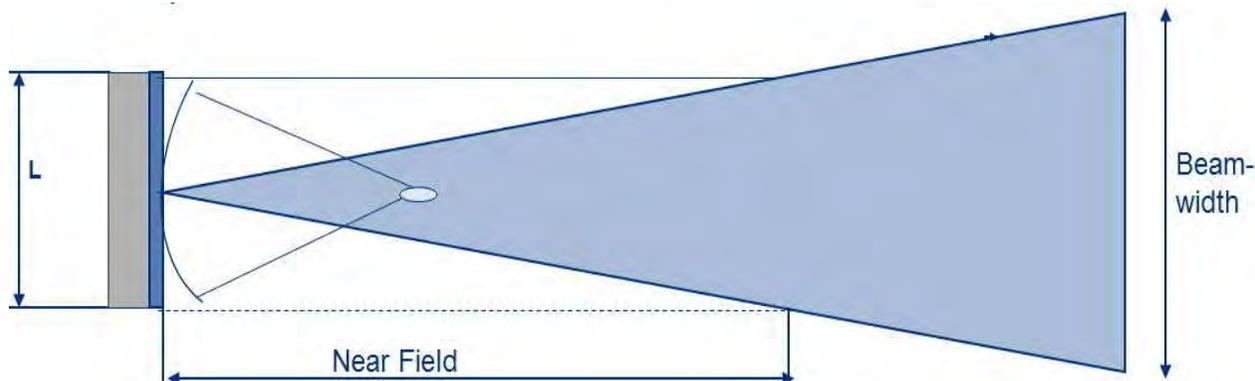

*Roll, Pitch and Yaw stabilization*

# EM 2040 – Wide Band Multibeam Survey requirements

In order to meet IHO S-44 requirements **in all weather conditions**, the following features are necessary:

- Real-time stabilization of TX/RX beam for yaw, pitch and roll movements
- Sector transmission for robust bottom detection
- Nearfield focusing on both transmit and receive
- Dual swath per ping to meet Special order at 8 knot (or increased survey speed)

## When is focusing necessary ?

The near field length of a system depends on frequency and TD length:

### Examples:

EM 2040-04: ~100m

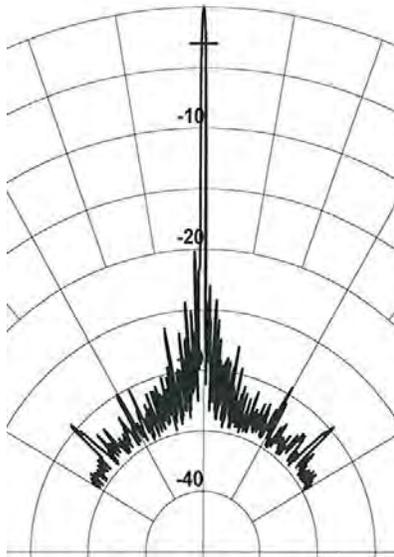

EM 2040-07: ~25m

Inside the near field the beam-width is as wide as the physical size of the transducer

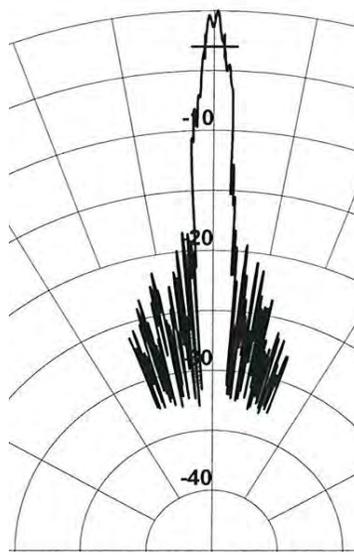

# EM 2040 – Wide Band Multibeam Survey requirements

In order to meet IHO S-44 requirements **in all weather conditions**, the following features are necessary:

- Real-time stabilization of TX/RX beam for yaw, pitch and roll movements
- Sector transmission for robust bottom detection
- Nearfield focusing on both transmit and receive
- Dual swath per ping to meet Special order at 8 knot (or increased survey speed)

**Focusing enabled.**  
Beamwidth is **0.4 deg.**

**Focusing disabled,**  
Beamwidth is **5 deg.**  
SL is 6 dB weaker

## When is focusing necessary ?

The near field length of a system depends on frequency and TD length:

### Examples:

EM 2040-04: ~100m

EM 2040-07: ~25m

# EM 2040 – Wide Band Multibeam Survey requirements

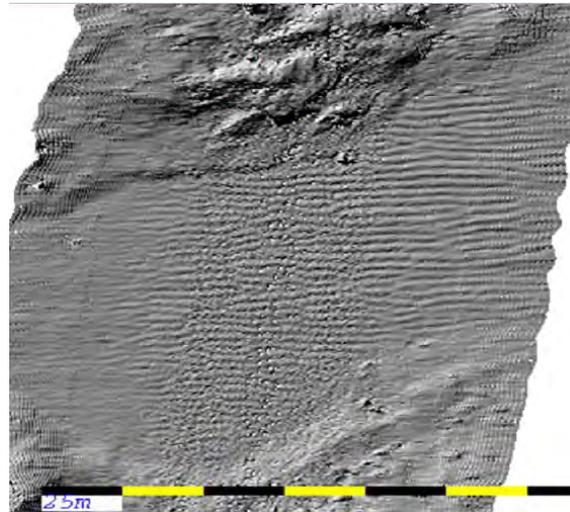

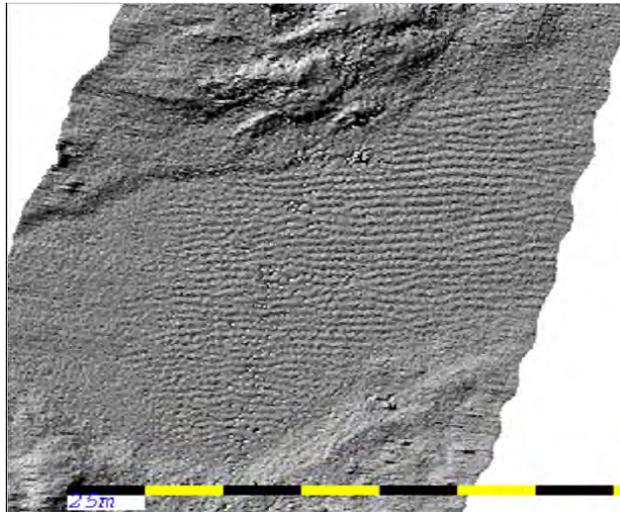

In order to meet IHO S-44 requirements **in all weather conditions**, the following features are necessary:

- Maintaining of all beams when swath coverage is reduced (auto/manual)
- High density beam processing for reduced footprint size
- FM chirp for long range and high resolution even in noisy environment

400 soundings

vs

256 beams

**The result of this technique:**  
-Higher resolution in outer beams  
-Higher across track density

The footprint size is reduced to  
<30% in the outer beams

# EM 2040 – Wide Band Multibeam System overview

## Operator workstation

- Standard high end computer

## Processing Unit

- 19" rack mount
- 4U high
- Rack and AUV versions available

## Transmit and receive transducers

- Single RX (one TX and one RX transducer)
- Dual RX (one TX and two RX transducer)

# EM 2040 – Wide Band Multibeam System overview

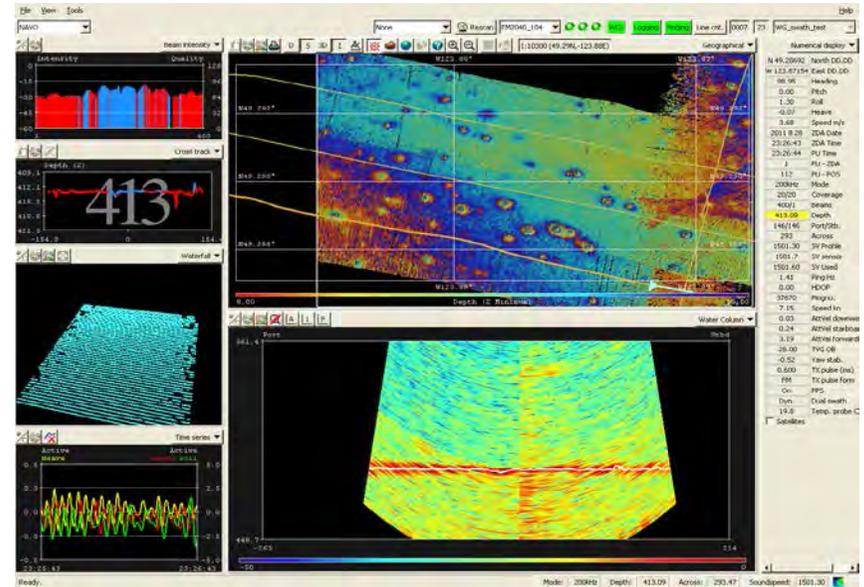

KONGSBERG

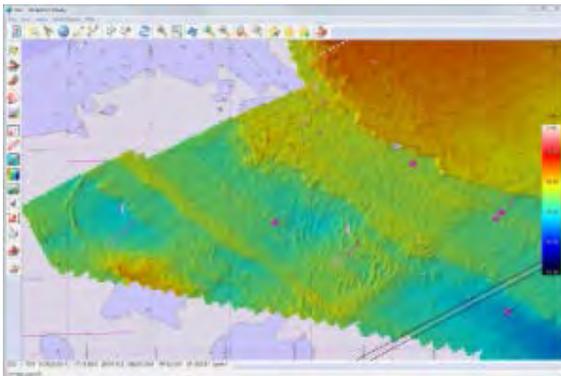

## Operator software

EM 2040 can be delivered with the following operator software:

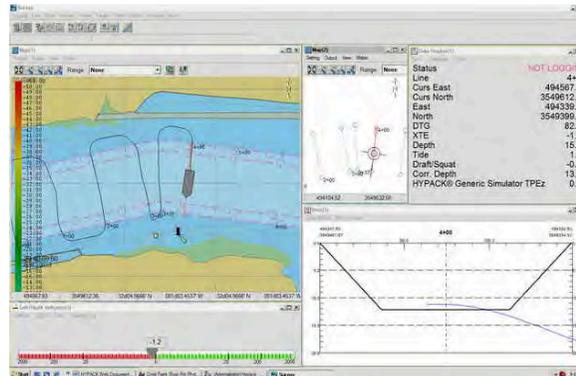

- SIS from KM
- QINSy from QPS
- HYPACK
- EIVA
- Triton

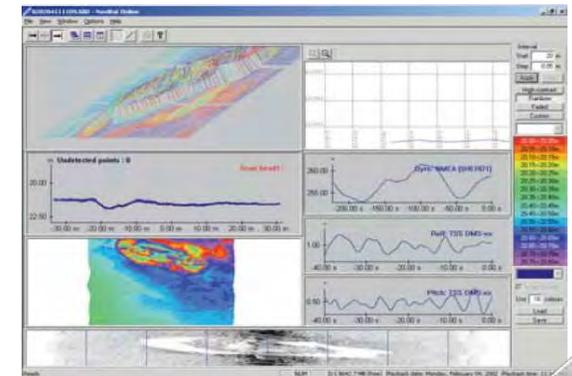

SIS from KM

QINSy from QPS

HYPACK

EIVA

# EM 2040 – Wide Band Multibeam System overview

EM 2040 0.7 degree RX transducer  
Dimensions : 41 x 14 x 14 cm (L x W x H)  
Weight : 16 kg

EM 2040 0.7 degree TX transducer  
Dimensions : 41 x 14 x 15 cm (L x W x H)  
Weight : 16 kg

EM 2040 0.4 degree TX transducer  
Dimensions : 73 x 14 x 15 cm (L x W x H)  
Weight : 30 kg

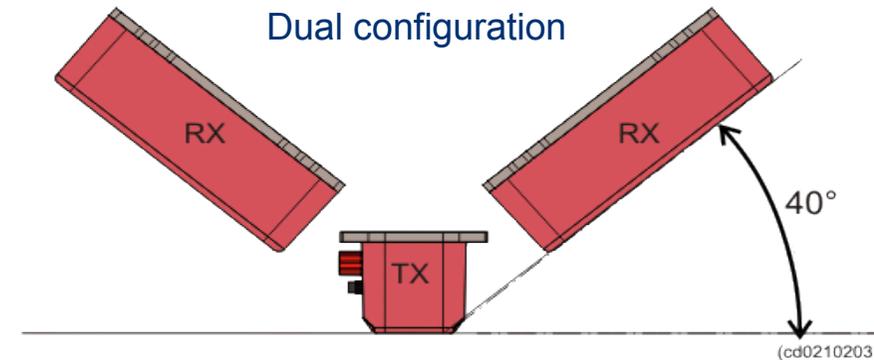

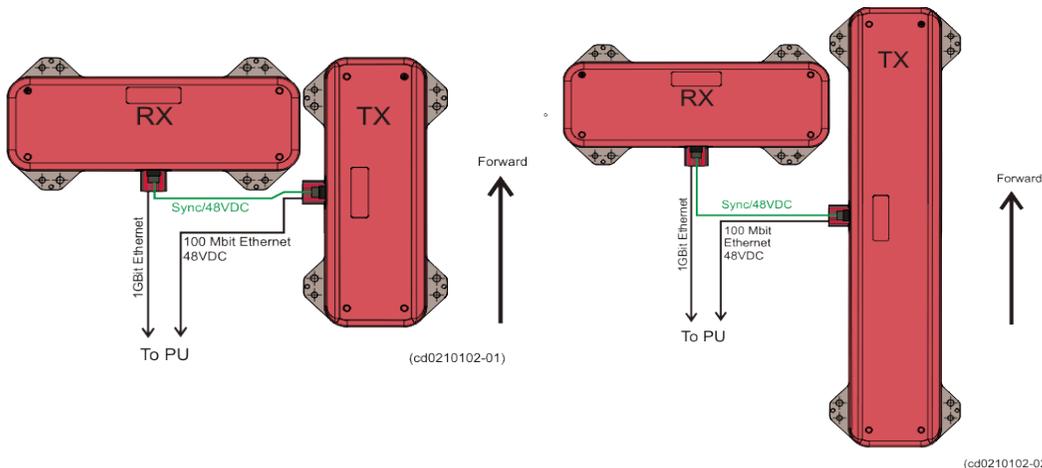

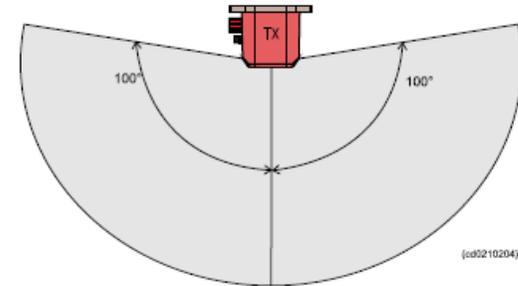

# EM 2040 – Wide Band Multibeam System overview

Available system configurations:

**EM 2040-07:** 0.7 x 0.7 degree (TX x RX)

**EM 2040-04:** 0.4 x 0.7 degree (TX x RX)

Both available in Dual RX for increased coverage

Single RX -07:  
Coverage 5.5x Depth  
(140 degrees)

Single RX -04 :  
Coverage 5.5x Depth  
(140 degrees)

Dual RX -04/-07:  
Coverage 10x Depth  
(200 degrees)

# EM 2040 – Wide Band Multibeam System specification

Frequency : 200 - 400 kHz

Range : 0.5m down to 600m

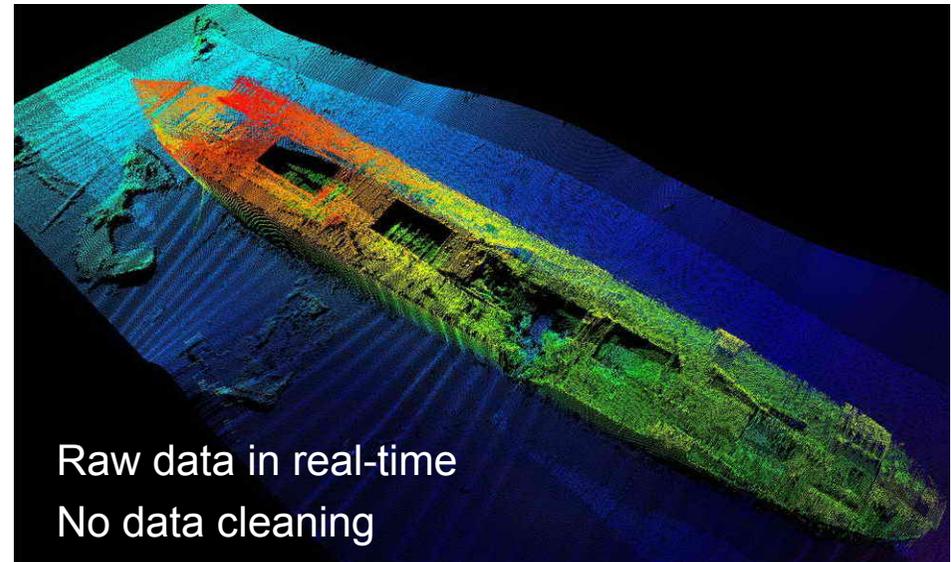

Swath per ping : Single and Dual swath

Stabilization : Active roll, pitch and yaw  
(+/- 15/10/10 deg)

Compensation : Roll, pitch, heave

Beam angles :

	200 kHz	300 kHz	400 kHz
<b>0.4° TX</b>	0.7°	0.5°	0.4°
<b>0.7° TX/RX</b>	1.5°	1.0°	0.7°

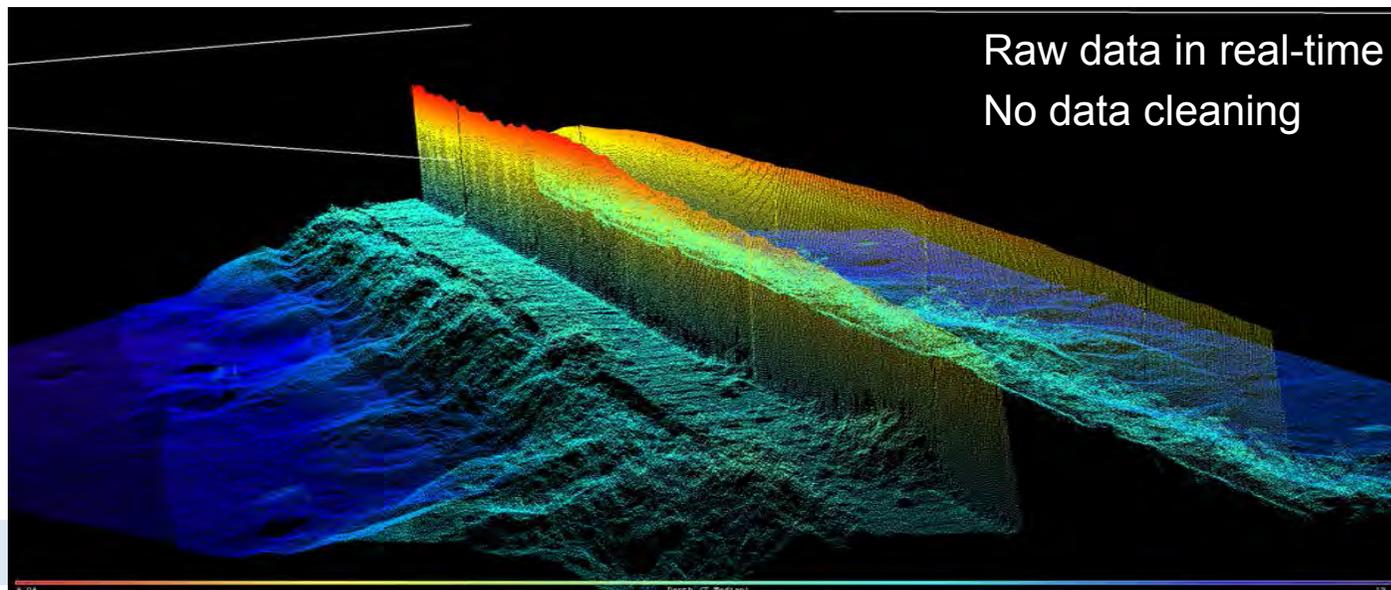

# EM 2040 – Wide Band Multibeam System specification

No of soundings : Single RX - 400 / 800(Dual Swath)  
Dual RX - 800/ 1600(Dual Swath)

Swath width control: Maintain all beams when swath width  
is reduced due to max range or manual

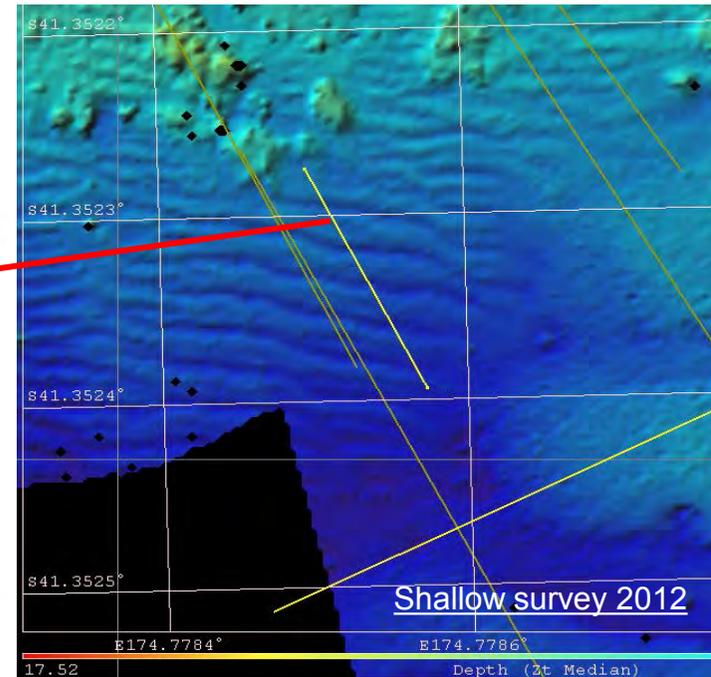

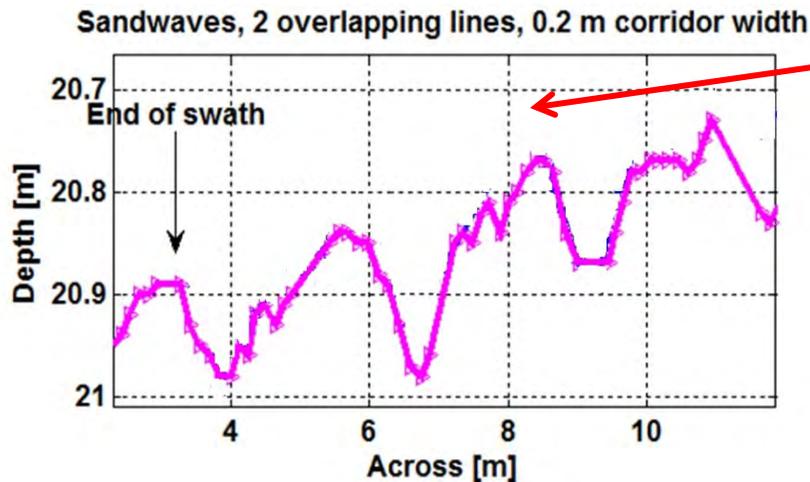

Pingrate : >50 Hz

# EM 2040 – Wide Band Multibeam System specification

Beam processing : High density beam processing  
The footprint size is reduced to less than 30% in  
the outer beams

Focusing : On transmit and receive

## High density mode

Sand-waves are tracked through out the swath. 1cm ripples can be seen.

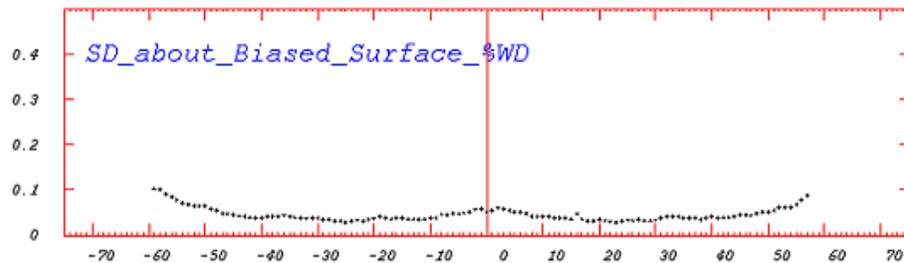

# EM 2040 – Wide Band Multibeam System specification

TX pulse : CW and FM Chirp

TX pulses : From 25us (CW) to 12ms (FM)

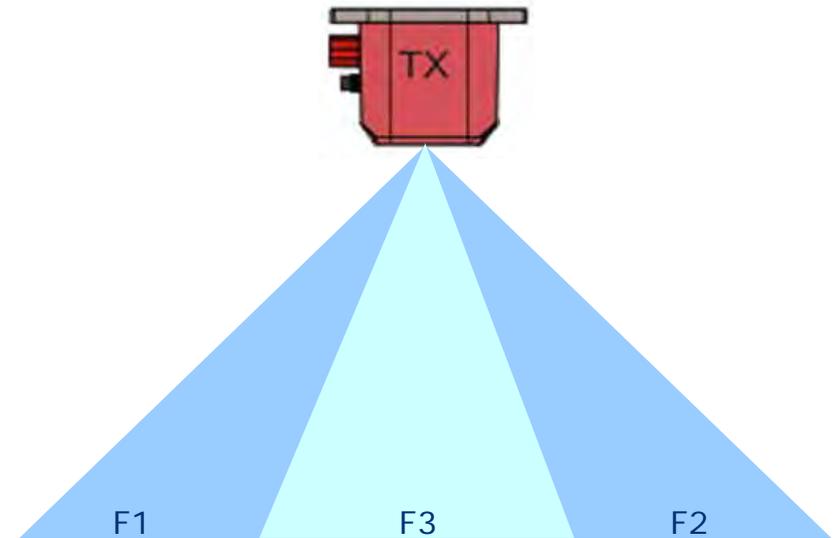

TX beam forming : 3 transmit sectors

Accuracy ( $\sigma/4$ ) : <10mm

## Standard deviation

0.1% of depth (67%) when combined with high-end sensors.

## Benefit of sector transmission:

- Very effective yaw and pitch stabilization
- Strong damping of interference
- Individual TX focus in each sector gives a smaller TX footprint

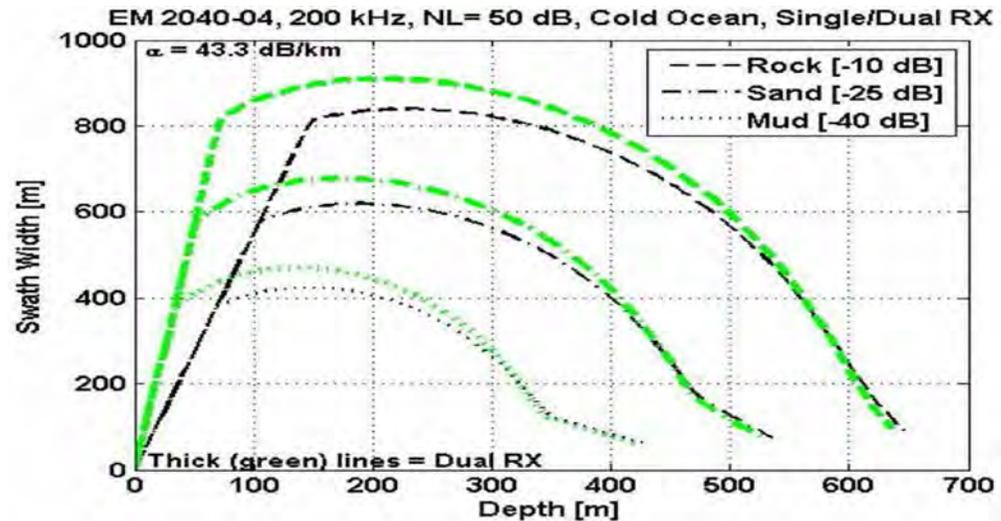

# EM 2040 – Wide Band Multibeam System specification

Coverage Single RX: 140 deg / 5.5x water depth

Coverage Dual RX : 200 deg / 10x water depth

Coverage TX : 200 deg

Coverage plot for 0.4x07  
Single RX vs Dual RX

# EM 2040 – Wide Band Multibeam System specification

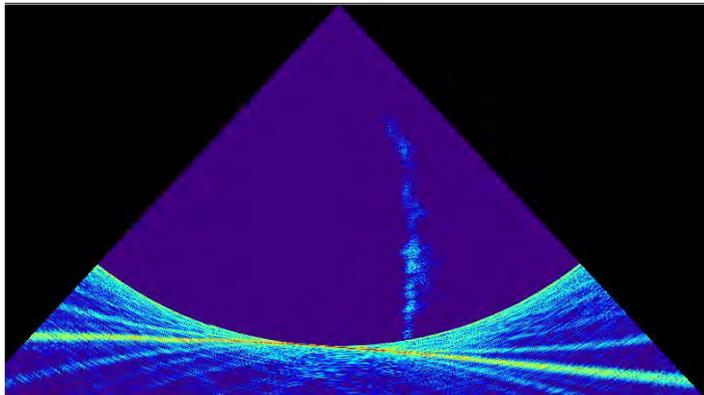

KONGSBERG

Time synchronization: Ethernet IEEE 1588 and ZDA / 1PPS

Water column : Display and logging of water column data (logging as option)

Seabed Imagery standard : High quality beam-formed, included as standard

Gas leak detection

# EM 2040 – Wide Band Multibeam Water Column Data

## Water column logging

Water column data can selectively be logged to either the standard log file (.all) or to a separate water column file ('.wcd').

Typical data rate (Mbyte/hour) per swath with EM 2040					
Depth below transducer	Bathymetry	Seabed Image	Water Column	Velocity	Mode
10 m	850	350	5500	43	Very shallow
45 m	225	165	3200	43	Shallow
200m	100	50	1700	43	Deep (FM)

The difficult part of water column processing is to separate the gold nuggets from the rest of the worthless data.

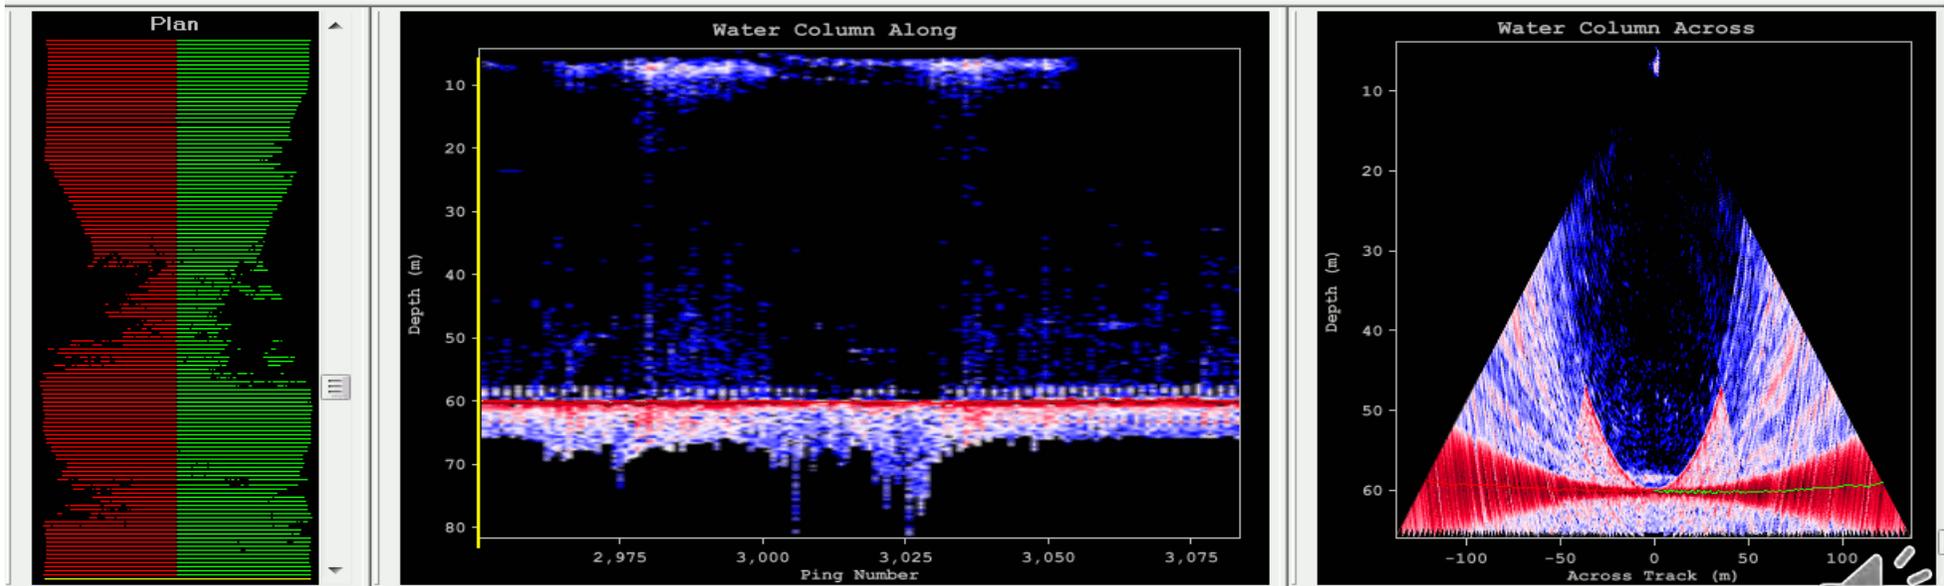

# EM 2040 – Wide Band Multibeam Water Column Data

## It's not all about the pretty picture!

EM multibeam echosounders provide amazing water column data as well as bathymetric information even under rough survey conditions.

Water column data has rapidly become a necessary information for many ocean mapping applications. In this example the WCI module in CARIS HIPS is used to investigate acoustic noise caused by aerated water at the transducer array.

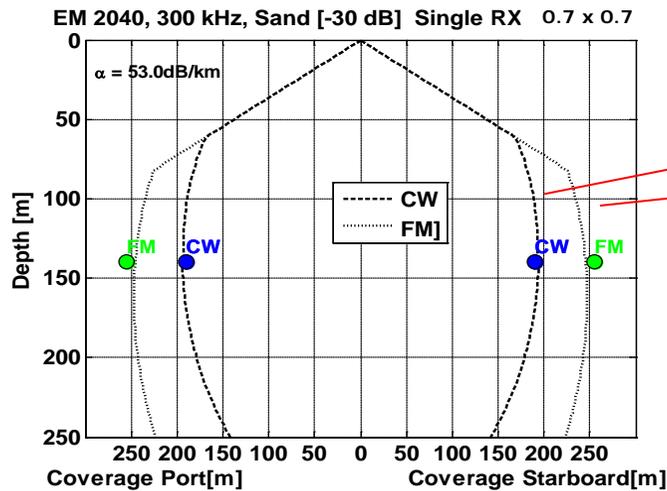

Data courtesy of Gardline

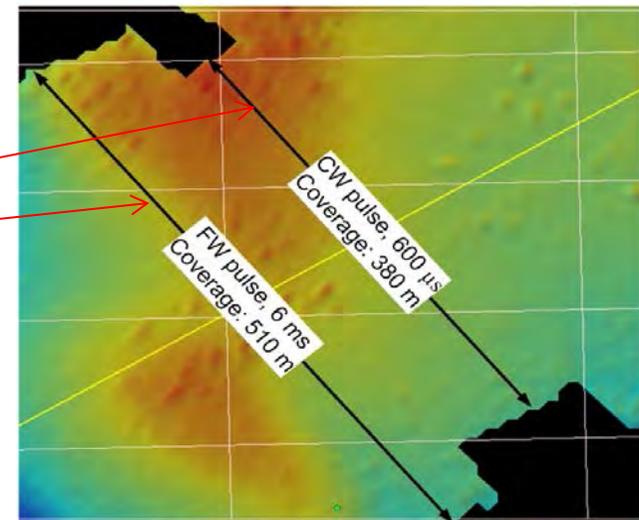

# EM 2040 – Wide Band Multibeam FM chirp

## Why use FM ?

The benefit compared to CW is increase in range / swath coverage and increase of resolution

Estimated coverage

Measured coverage

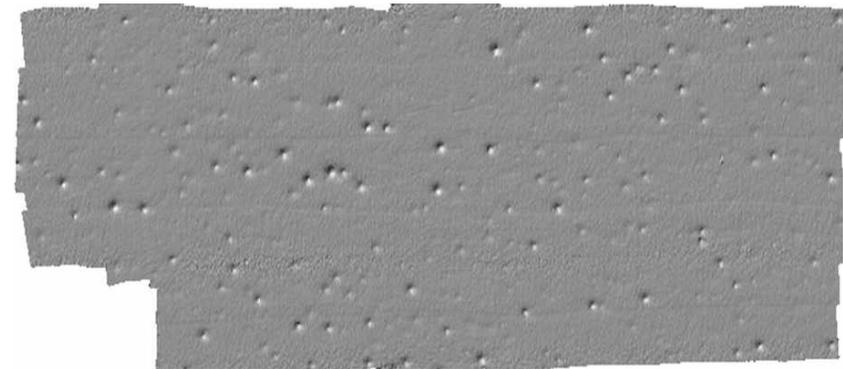

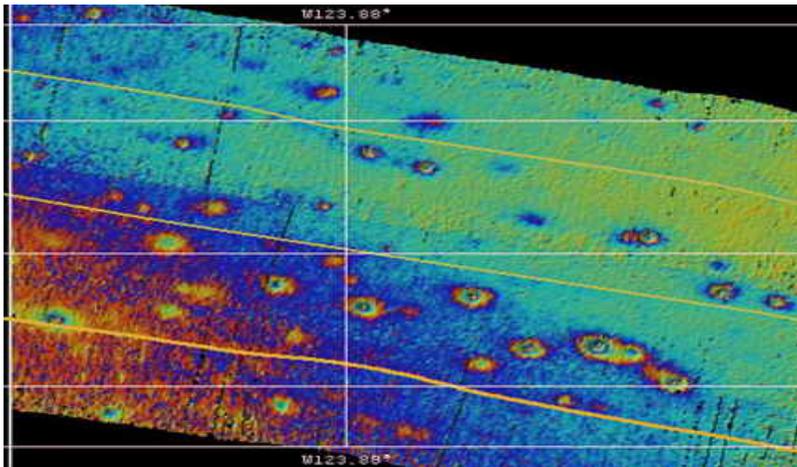

Up to 35% increase in swath coverage has been verified  
when switching from CW to FM

# EM 2040 – Wide Band Multibeam FM chirp

## Why use FM ?

The benefit compared to CW is increase in range / swath coverage  
and increase of resolution

### EM 2040-04:

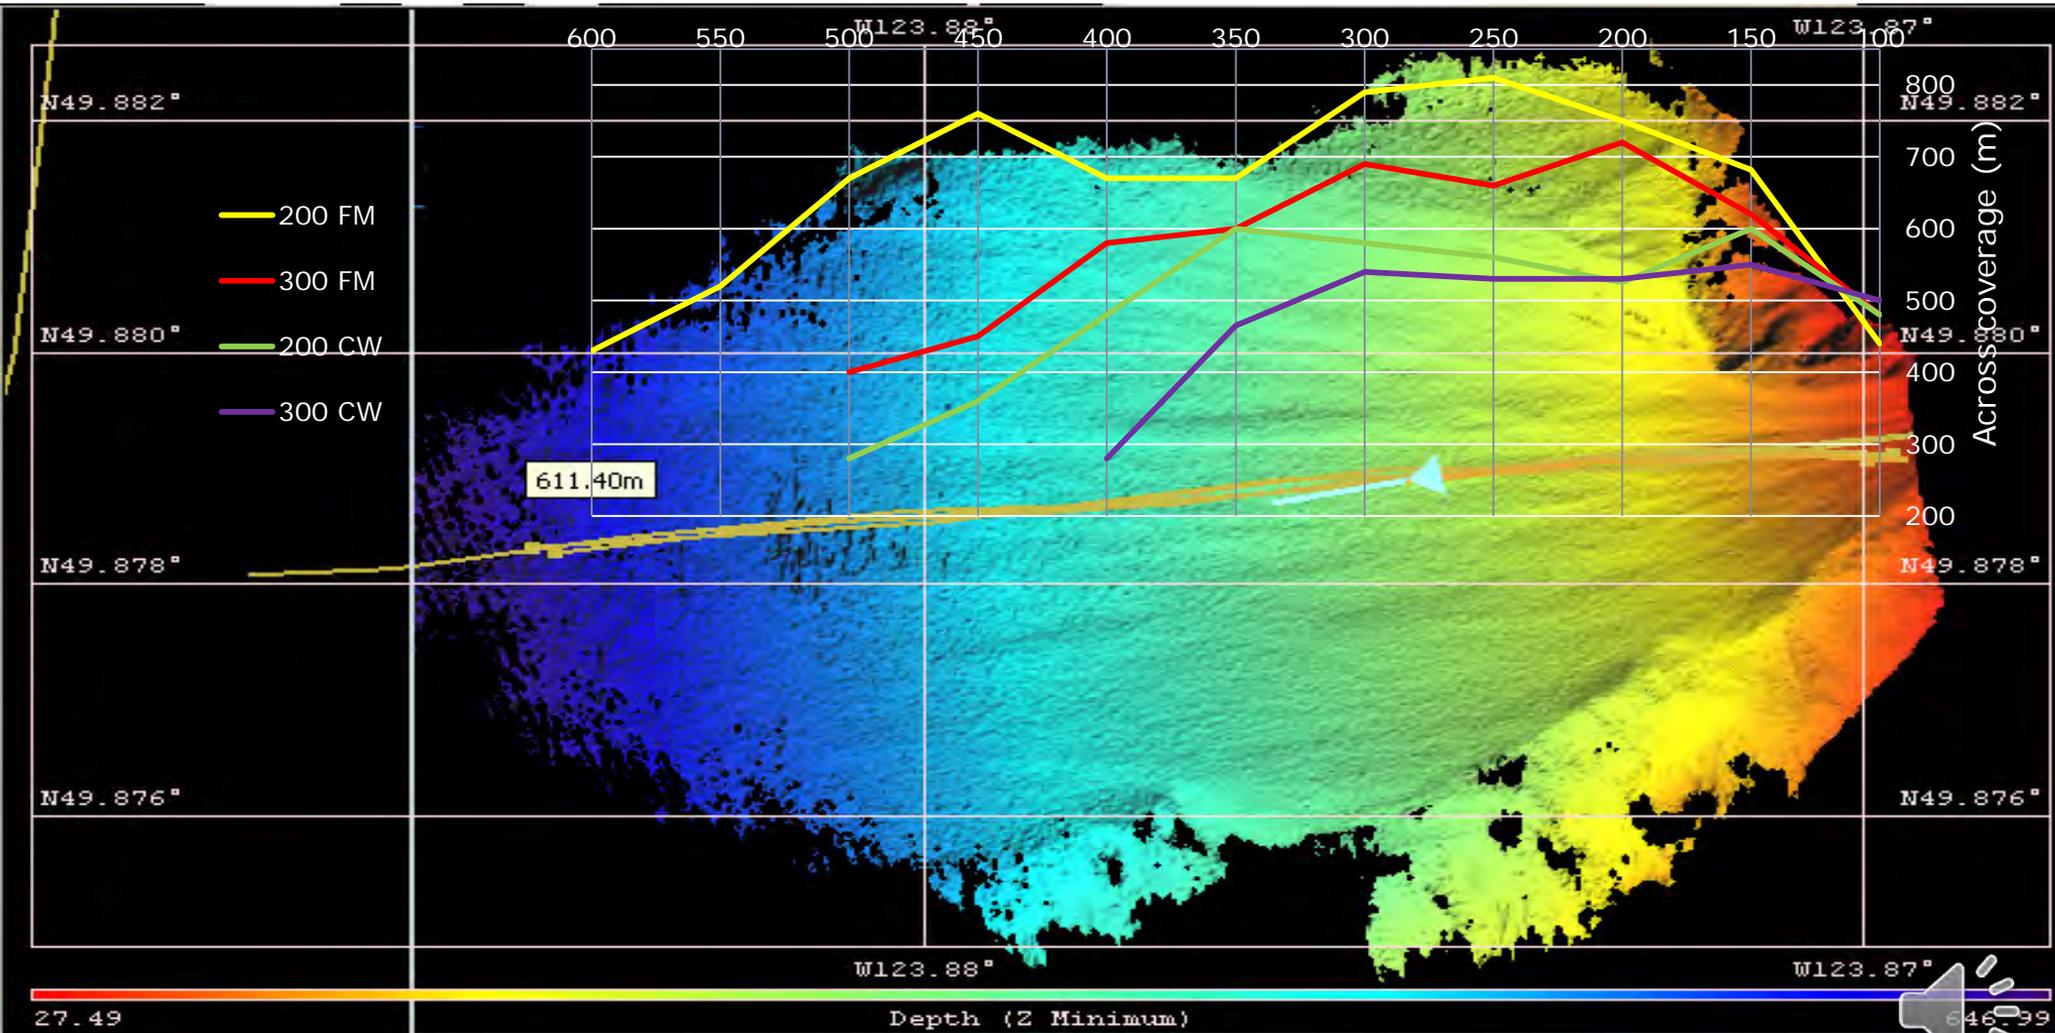

1-2m deep pockmarks at 400 m depth,  
200 kHz with 12ms FM.

This is equivalent to 0.6 ms CW in resolution

# EM 2040 – Wide Band Multibeam FM chirp

Performance test of EM 2040-04 Single RX at Jervis Inlet, vessel CHS Otter Bay, gravel seabed

# EM 2040 – Wide Band Multibeam

## Comparing EM 3002 and EM 2040

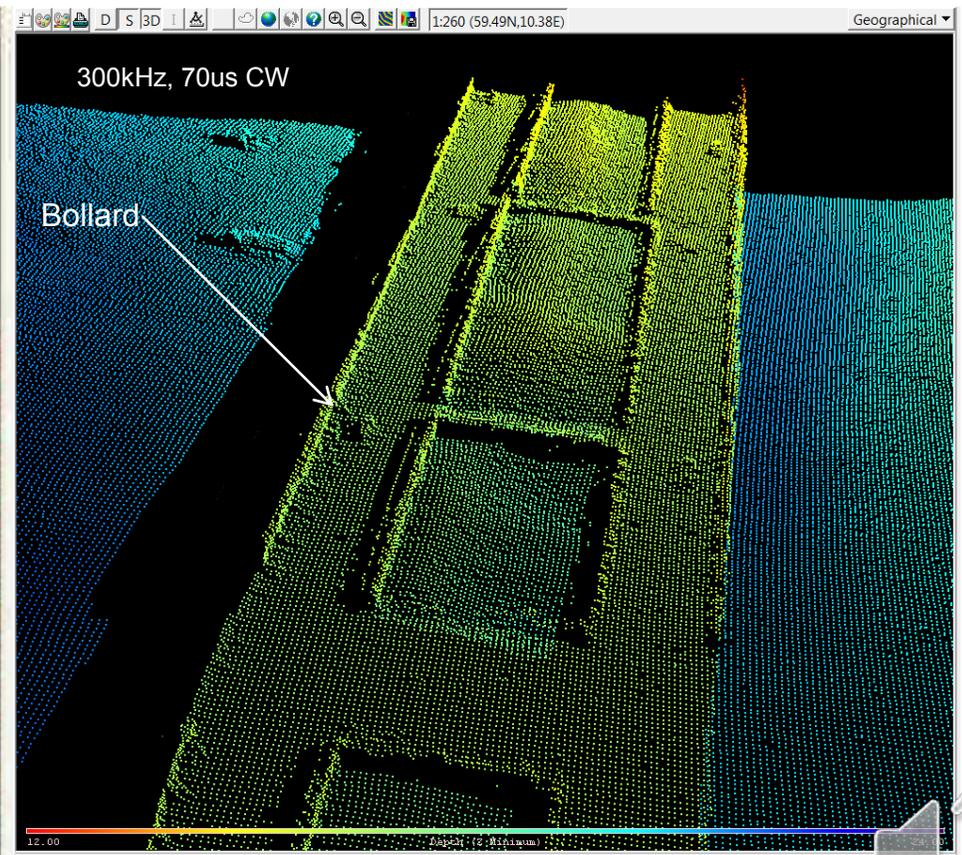

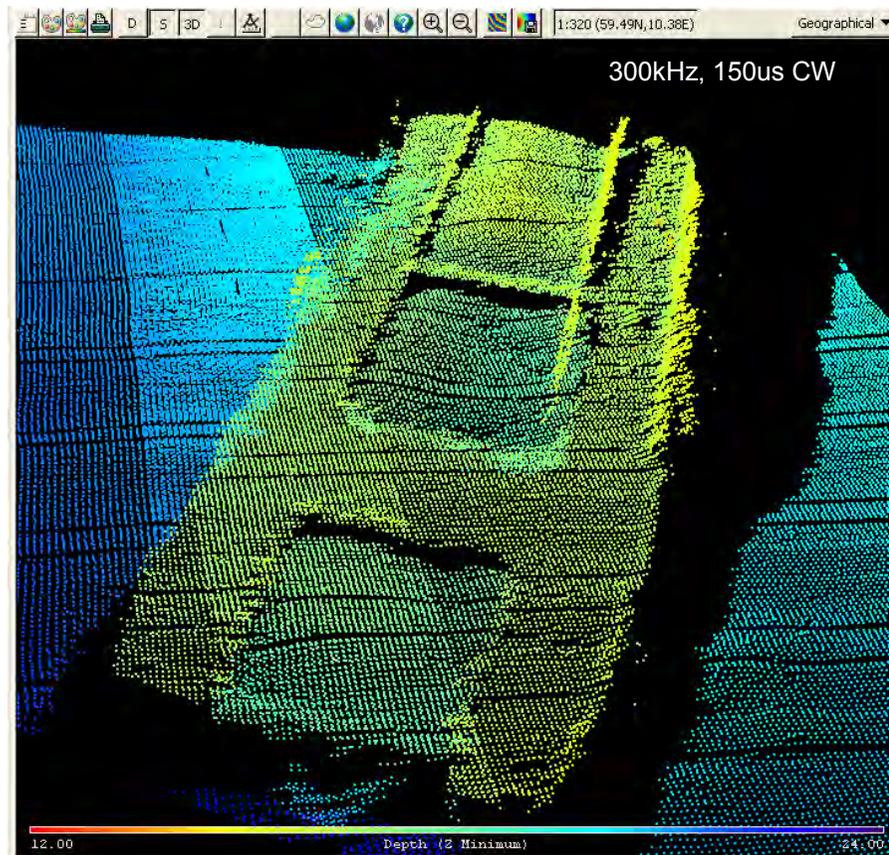

Feature	EM 2040	EM 3002
Frequency	200 to 400 kHz	300 kHz
TX beam angle	0.4 and 0.7 deg	1.5 deg
RX beam angle	0.7 deg	1.5 deg
Swath per ping	2	1
No of beams	400 / 800 / 1600	254 / 508
Pulse type	CW and FM chirp	CW
Pulse length	25us to 12 ms	150, 400 us
Beam focusing	TX and RX	RX
Accuracy	1cm	5 cm
Stabilization	Yaw, pitch, roll	Roll, pitch
Sectors TX	3	1
Firmware	Latest generation beamformer	....
