

Latest EIVA developments Trends and roadmap

NOSP – 5 November 2015

Speaker – Ole Kristensen

- Software manager @ EIVA
- Has been with EIVA for 22 years
- Initially, developer of the first NaviScan back in 1993
- Lead programmer in NaviPac since 1997
- Head of software department since 2000
- Master of Science, Computer Science

Software

Integrated system solutions

Equipment

Rental

24/7 support

Training

Optimising the businesses
of offshore professionals

Headquartered in Denmark • Sales offices in Bremen and Singapore
Founded in 1978 • Privately owned
Financially strong • ISO 9001-certified

Company update

EIVA is doing well – despite the oil & gas recession

- 2014 was not as busy as expected
- 2015 is looking busier than 2014
- EIVA has continued to increase its investment in product development, organisation and competences

We are following an overall strategy:

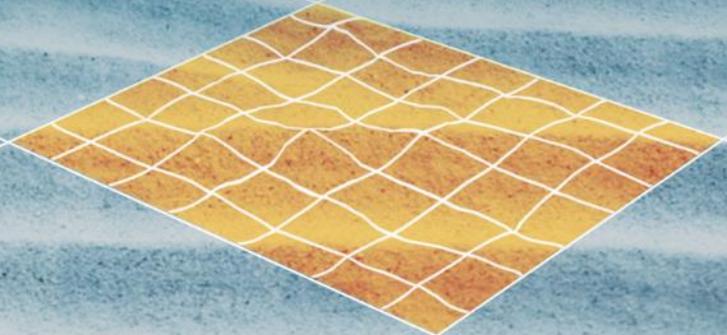

‘High-end **products provider** to marine segments’

We are currently focused on **international presence and growth** and **product portfolio expansion**.

NAVISUITE

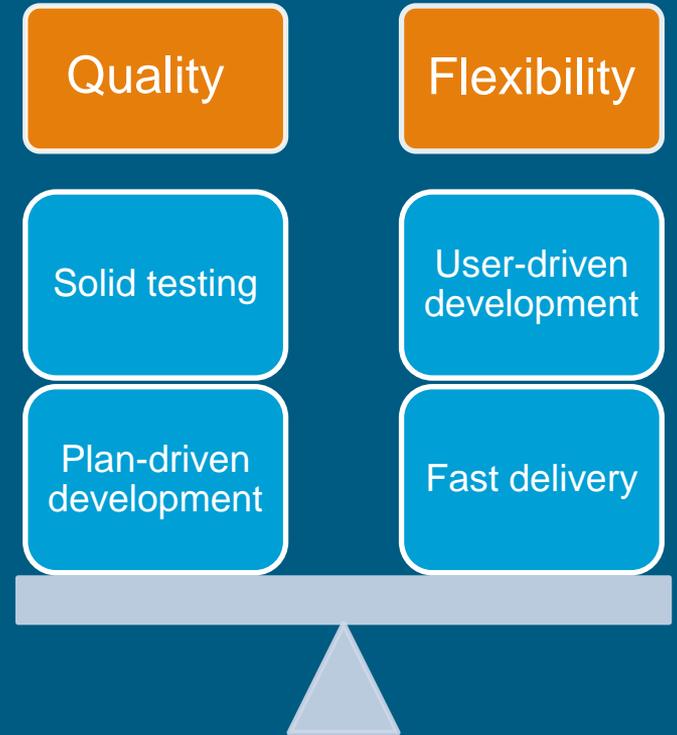

Let's look at the EIVA solution

- NaviSuite – The name of the entire family
- NaviSuite Nardoa is a name of a specific solution – eg pipeline inspection
- NaviPac is the name of a specific product

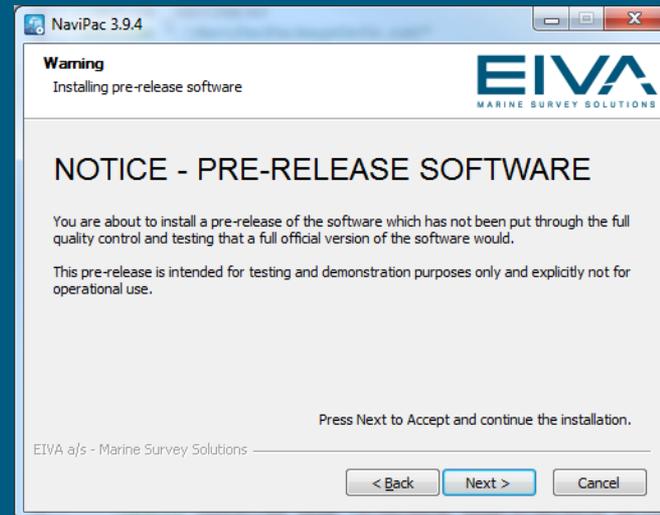

Balancing the impossible

- Most of you want fully tested software
- Most of you want new instruments supported **now**
- Nobody likes frequent updates to vessel installations
- Many of you like being involved when we develop new features
- Many of you are involved in testing of new releases (thank you!)
- A lot of you use non-official versions

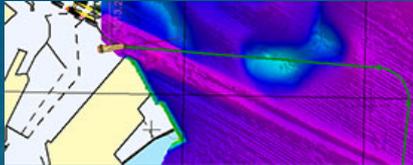

Three different version types

- **Internal (marked INTERNAL)**
 - Straight from the development group and only gets outside to persons involved in the development. You got them from EIVA's development team or from someone who got them from us ... use at your own risk, no real testing has been performed.
 - eg 3.9.7 INTERNAL (don't try to understand the number).
- **Release candidate (marked RC)**
 - Once we start testing for a release, we make RCs available for beta testing – these can be found in a special section on our download site.
 - eg 3.9 RC 4 (the fourth candidate before 3.9).
- **Official release**
 - eg 3.9
- **The type of version is very clear both when you download and install the software**

There are several NaviSuite product options

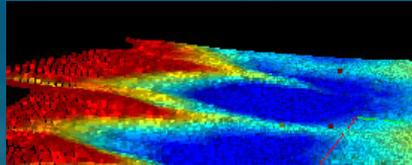

NaviPac 3.10

NaviPac Lite
NaviPac Plus
NaviPac Single User
NaviPac Pro

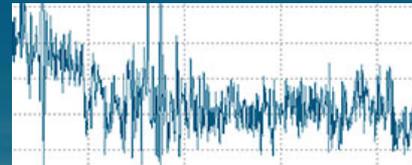

Optional extras

- Catenary
- Barge
- Tug
- Cable lay

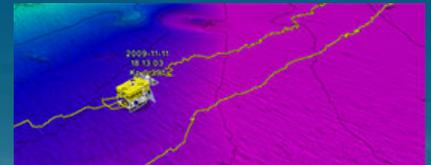

NaviScan 9

NaviScan

NaviEdit 8

NaviEdit Lite
NaviEdit Pro

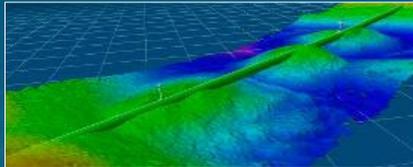

NaviModel 4

NaviModel Free Viewer
NaviModel Analyser
NaviModel Producer

Optional extras

- S-CAN
- 3D pipe

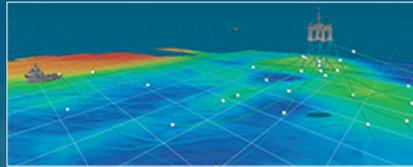

... some of which we have collected in bundles

NaviSuite Nardoa

Advanced 3D pipeline and cable inspection

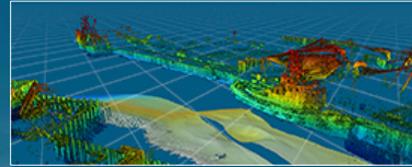

- NaviPac Pro
- NaviScan
- NaviEdit Pro
- NaviModel Producer with 3D pipe & S-CAN optional extras
- NaviPlot

NaviSuite Beka

Anchor handling operation with advanced catenary simulation

- NaviPac Pro with Barge & Catenary optional extras
- Small licence for tugs

NaviSuite Kuda

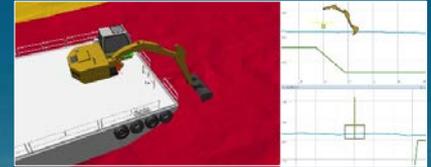

Shallow water surveys

Acquisition

- NaviPac Single User
- NaviScan

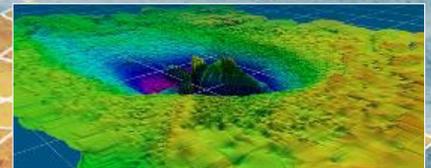

Acquisition & post-processing

- NaviPac Single User
- NaviScan
- NaviEdit
- NaviModel Producer

NaviSuite Uca

Excavator 3D display

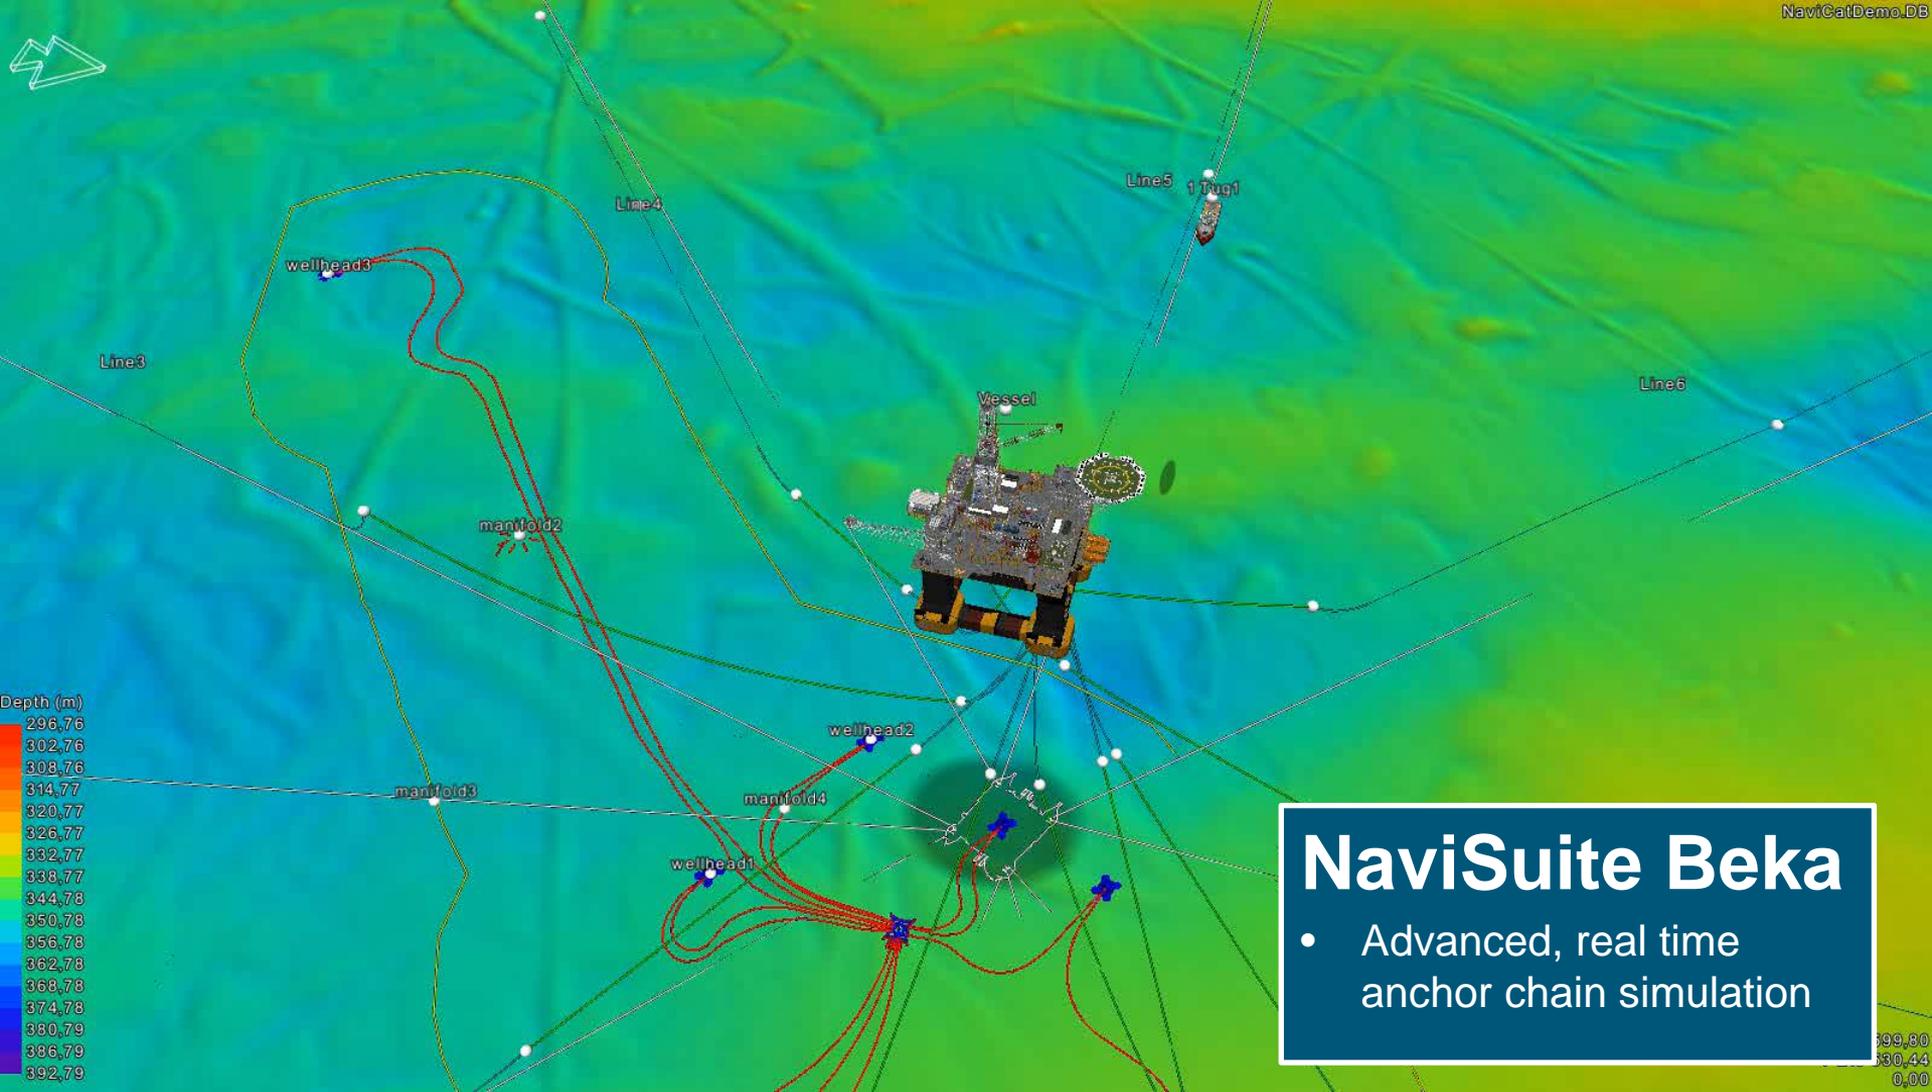

NaviSuite Edulis

Permanent monitoring

Some new features

- NaviSuite Beka
Advanced anchor chain simulation – planning and real time
- Video and still photo
The link between data and video
- Laser – Lidar and subsea for mapping
- Laser for navigation
- eLearning

2008-05-20
15:50:53

Video – a sensor like any other

- Basically, we do not care about the video source – it is just another sensor
- We are using VLC player toolkit – so if it works in VLC, it works in NaviModel
- File names must contain start time of video – eg 2011-0818-010354-000--CENTRE.avi
- [20071010002735904@C-STBD.mpg](#)
- Uniform frame rate
- NetMC, VisualSoft, SubC Control, Fugro, etc

But it's slow

- It's very time-consuming to work with
- In the best case, video review is double the speed of survey
- It's boring ☹️

- Paused Speed:

StatOilHydro
15:
ALT

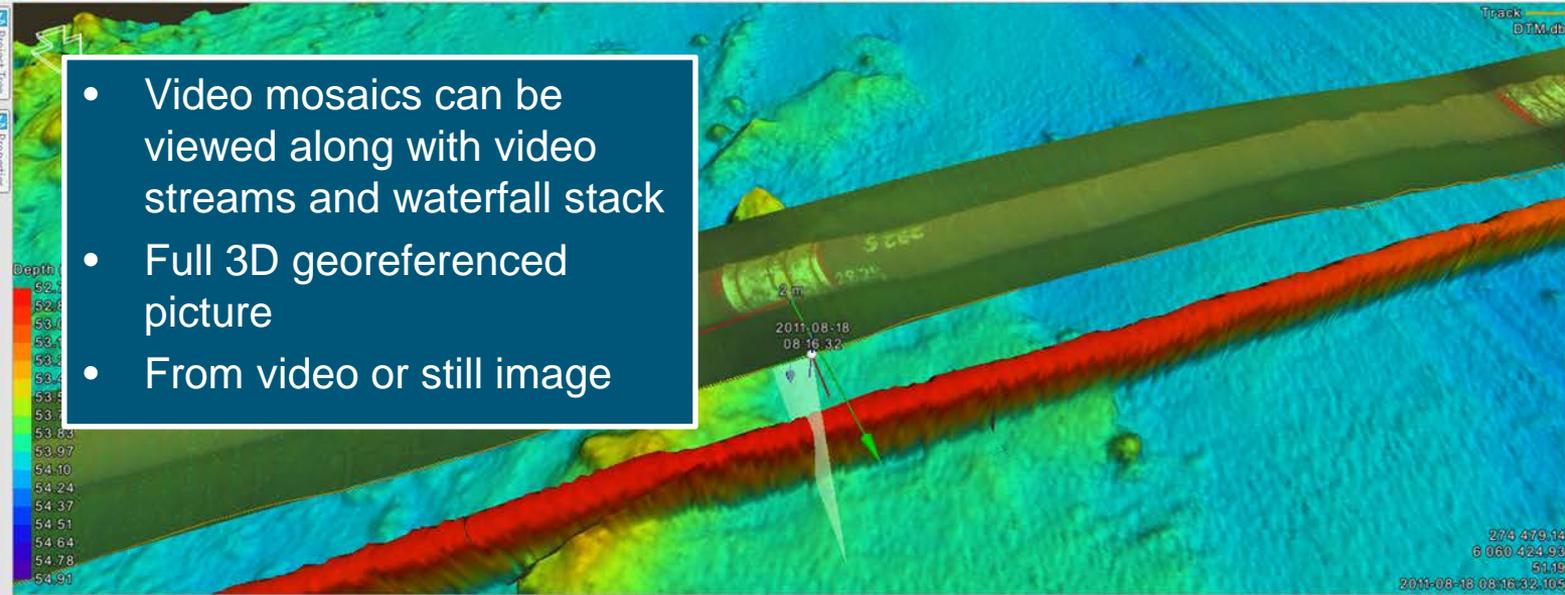

0.7413 Depth 07.24
1.118 Gyro 36.10
11 0.00 Pitch -1.11
d Survey

DCP
subsea

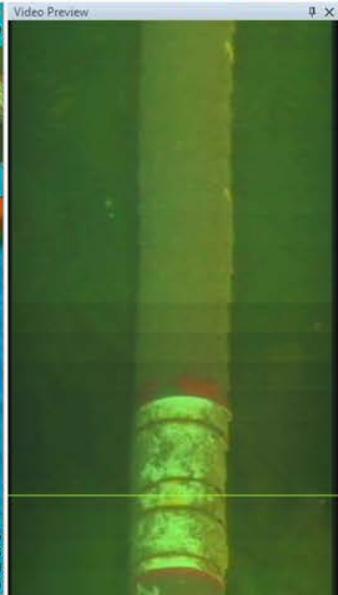

Port

Centre

Stbd

- Video mosaics can be viewed along with video streams and waterfall stack
- Full 3D georeferenced picture
- From video or still image

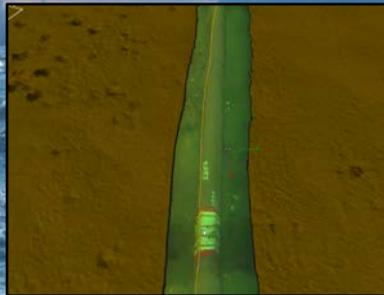

Video Window - Paused Speed: 100%

PORT	CENTRE	STBD	AUX
18 08 2011 UTC 08:16:32 E 274479.0	HP: 14021 PCC: 9.52 H: 6060.256	HDD: 92.5 DPY: 55.31 RLT: 2.6	18 08 2011 UTC 08:16:32 E 274479.0

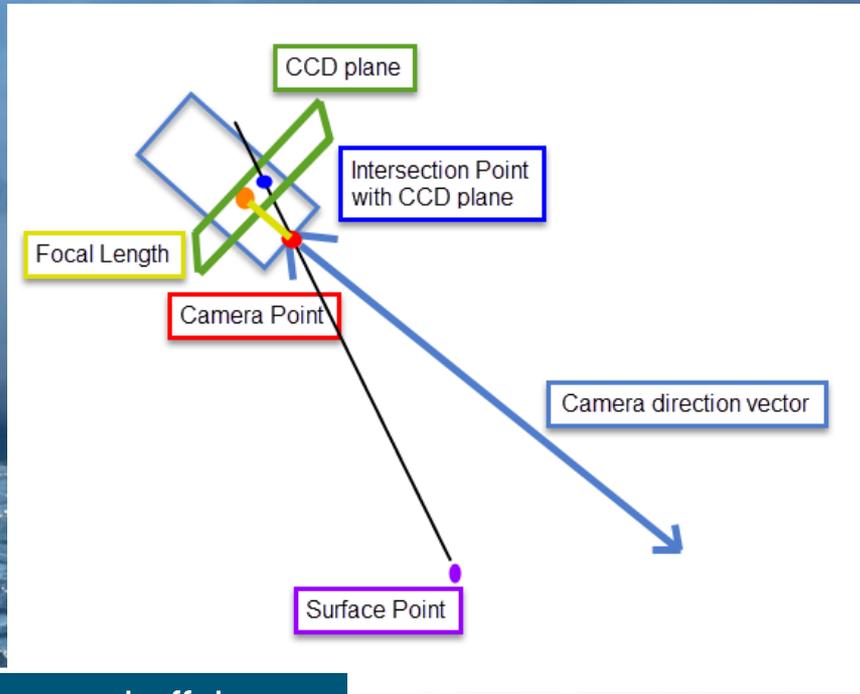

Full 3D georeferenced picture

Need to know a lot about:

- Camera mounting
- Camera characteristics
- Accurate positioning in 3D

MARINE

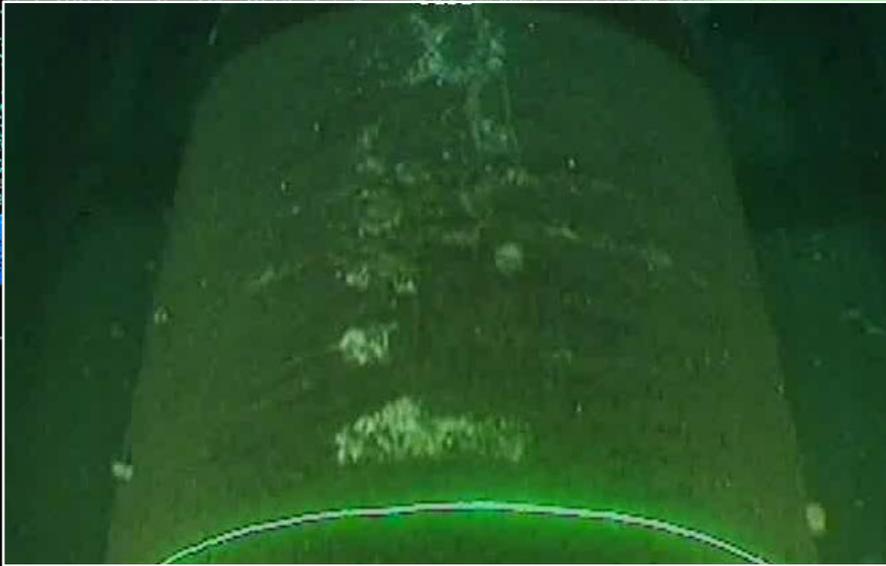

Very difficult in a real offshore environment

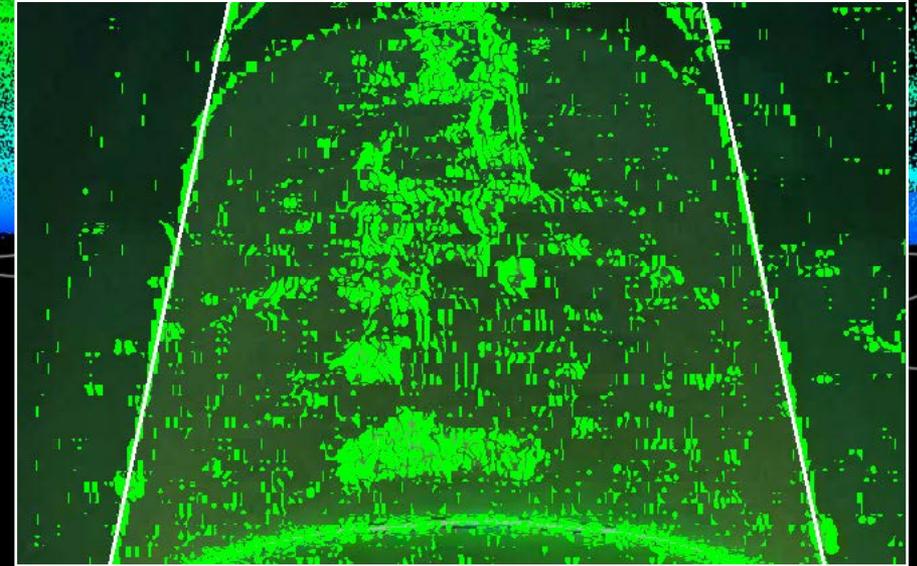

Edge detection

- The software uses 'edge detection' to find the pipe in the individual video frame. Using the edges, the software can stretch the image to match the pipe diameter.
- Edge detection is a scoring of significant differences in the picture – and thus finding lines in those

Edges

Raw video frame

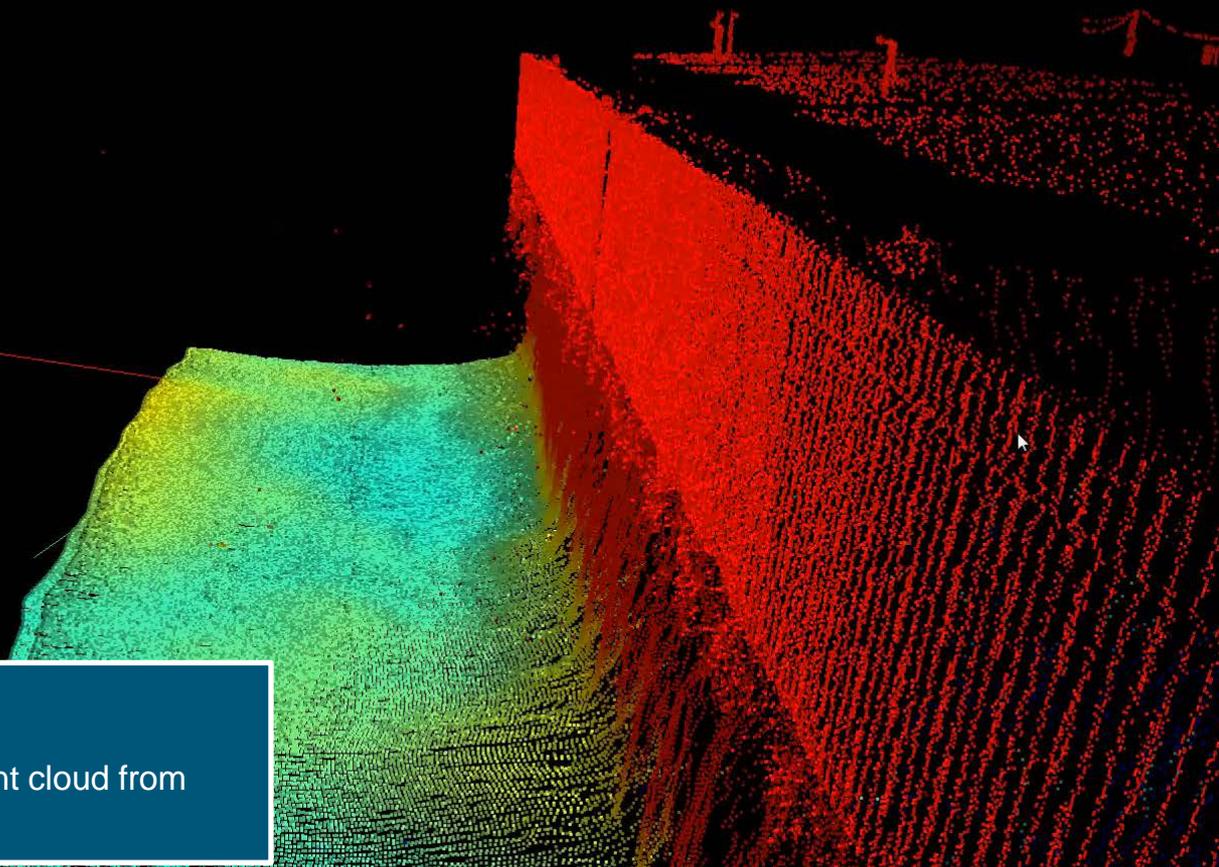

Same frame with edge detection in NaviModel

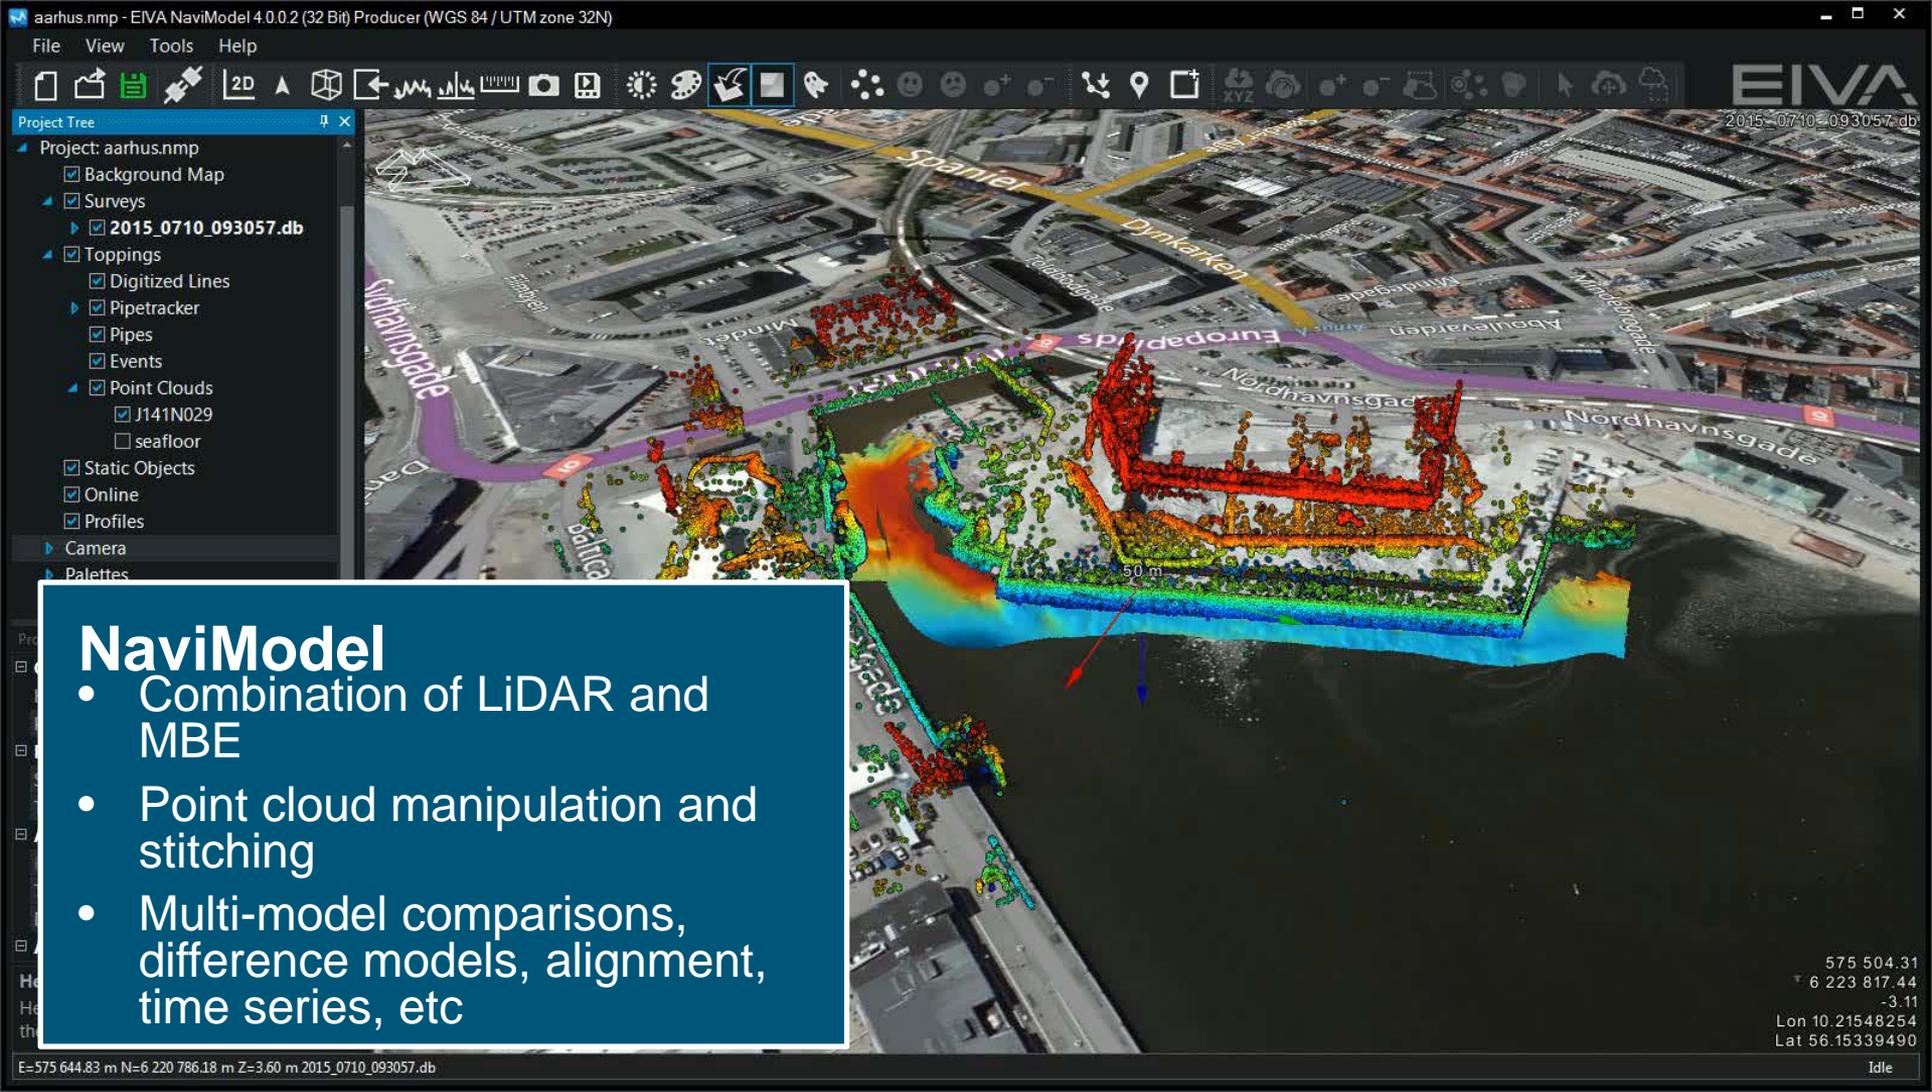

Still images killed the video star

- Better result
- Fast detection

NaviScan

NaviScan can show a live realtime point cloud from combined sonar and LiDAR

- Project Tree
- Project: aarhus.nmp
 - Background Map
 - Surveys
 - 2015_0710_093057.db
 - Toppings
 - Digitized Lines
 - Pipetracker
 - Pipes
 - Events
 - Point Clouds
 - J141N029
 - seafloor
 - Static Objects
 - Online
 - Profiles
 - Camera
 - Palettes

NaviModel

- Combination of LiDAR and MBE
- Point cloud manipulation and stitching
- Multi-model comparisons, difference models, alignment, time series, etc

eLearning

eLearning is a supplement to class room training

- Base skill level
- Train when you want
- Train in what you want

eLearning ensures that skills are kept up to date.

eLearning will become the foundation for getting on EIVAs class room courses

eLearning – How?

- It is internet based
 - Modules are completed online
 - Combination of tutorials, videos, animations, etc
 - Each module includes a test that is used to complete and pass the module
- It is personal
 - Individual login
 - Keep track of individual progress and results
 - Possibility to pause and resume
- It is a subscription
 - You sign up for a year at a time
 - EIVA will publish new modules and update existing modules as the software evolves

LiDAR navigation

NaviPac 4 includes easy use of LiDAR for relative positioning

Q3/4 – 2015

NaviPac 4.0

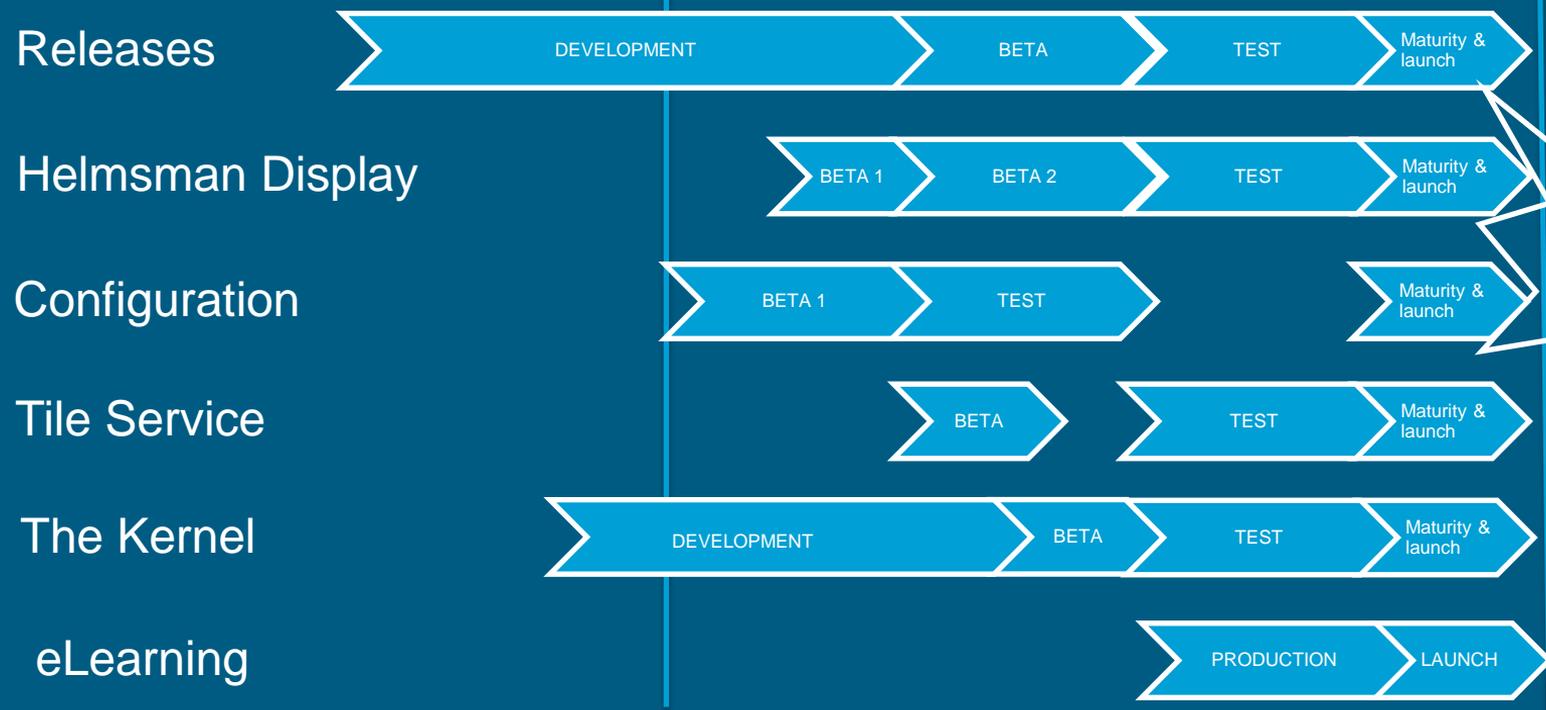

NaviPac 4.x

- NaviPac 3.10
- NaviModel 4
- NaviScan 9
- NaviEdit 8
- NaviSuite Kuda Single User
- New NaviScan drivers
 - Velodyne
 - Kongsberg GeoSwath
- Hot fixes?
- NaviCat – new version of Beka
- β version of the **Helmsman's Display** is ready if you want to try it out
- β version of the configuration program will be available in Q4
- New **Helmsman's Display**
 - Multiple 2D/3D
 - Many more remotes
 - Integrated **DataMon** views
 - Unmatched, ultra-high performance
- New simplified configuration
 - New user interface
 - Multiple, advanced subsea objects
 - Auto-discovery of equipment
- New **Tile Server**
 - High performance overlays
 - CAD, ortophoto, navigation charts
- New recording, new formats, concepts, etc
- New tug/barge user interface
- (And a lot of other very secret stuff ;-))
- ETA: OI 2016 London – March

NaviPac 4 release plan

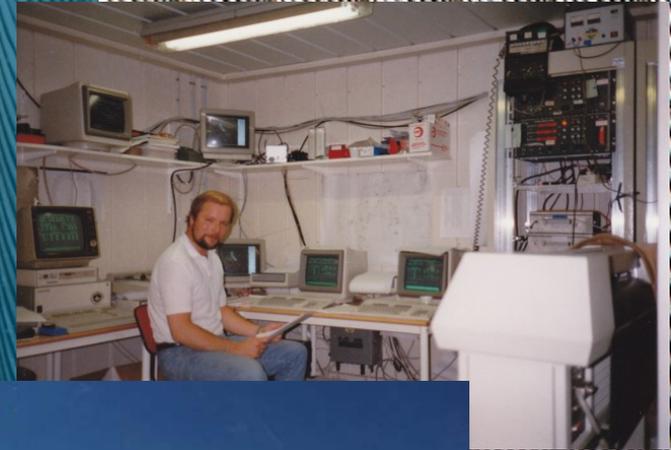

Oct Nov Dec Jan Feb March 2016

Background

- The 'modern version' of NaviPac was born in 1997 – based on code structure from a Sun Sparc UNIX version from 1994
- We call it generation 3
- The main structure has proven to be a stable and long-term base for new developments
 - GUI and kernel separated (Date/View)
 - Modular design
 - Network-based client/server
 - Scalable (Lite/Plus/Pro/TMS)

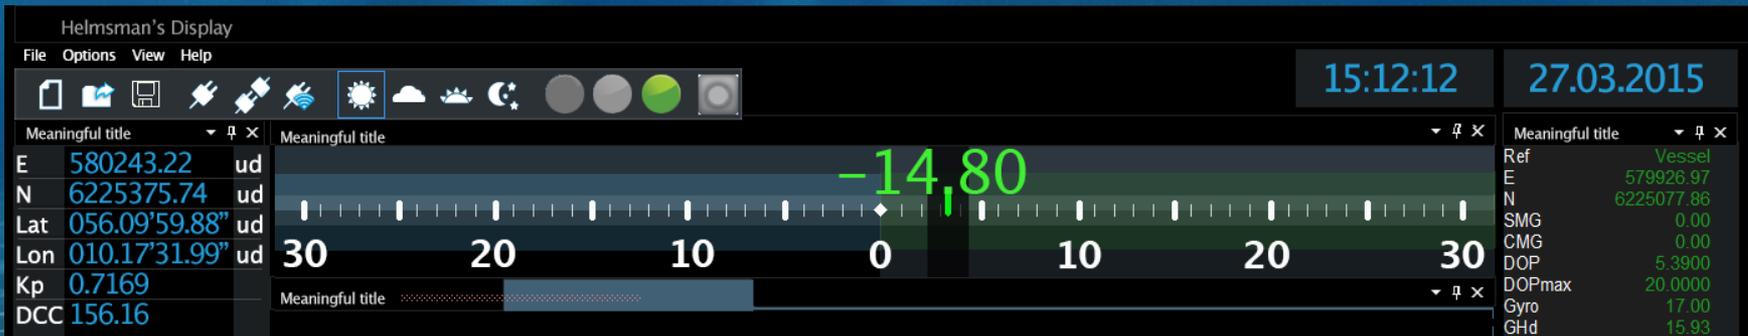

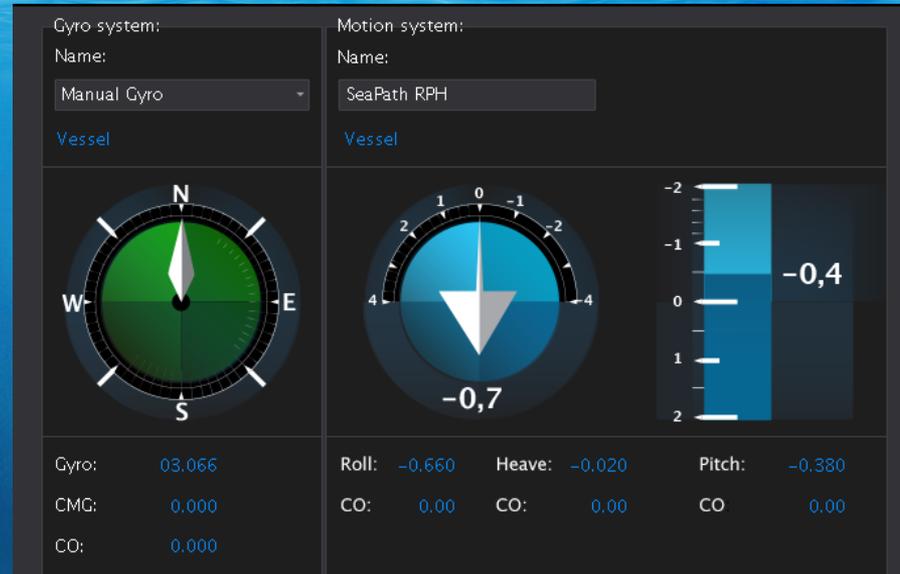

Usability and new looks

NaviPac 4

New generation – New looks

- Two skins
 - Windows (NaviPac 3.9 style)
 - Dark grey – modern and easy on the operator's eye
- Same icons – better usage
- Night vision
- New design of all graphical elements

Project Tree

The skin
 You have already seen it
 NaviModel 4
 They love it!

Technology

NaviPac 4

New technology

- Sharing functionality between NaviSuite modules
 - For EIVA, this means faster development due to shared components
- Microsoft .NET
 - New Windows technology requires .NET
 - Automated test
- Microsoft Windows
 - No dependency on Windows folders
 - Minimum Windows user rights
 - Many more remote Helmsman's Display instances

Easy, free and safe upgrade

- We have focused on making transition painless
- No loss of features compared to NaviPac 3.10
- NaviPac 4.0 will be made available as part of the SMS service
- NaviPac 4.0 will be backwards compatible
 - Configuration tool will work on NaviPac 3.10 configurations
 - **Helmsman's Display 3.10** will be part of NaviPac 4.0 software distribution, so it is possible to use a mix of NaviPac 3.10 **Helmsman's Display** with NaviPac 4 **Helmsman's Display**

What about NaviPac in the meantime?

- NaviPac 3.XX will be maintained for several years
 - Bug fixes
 - New drivers
 - Specific requirements catered to – but we would like to avoid making substantial GUI changes

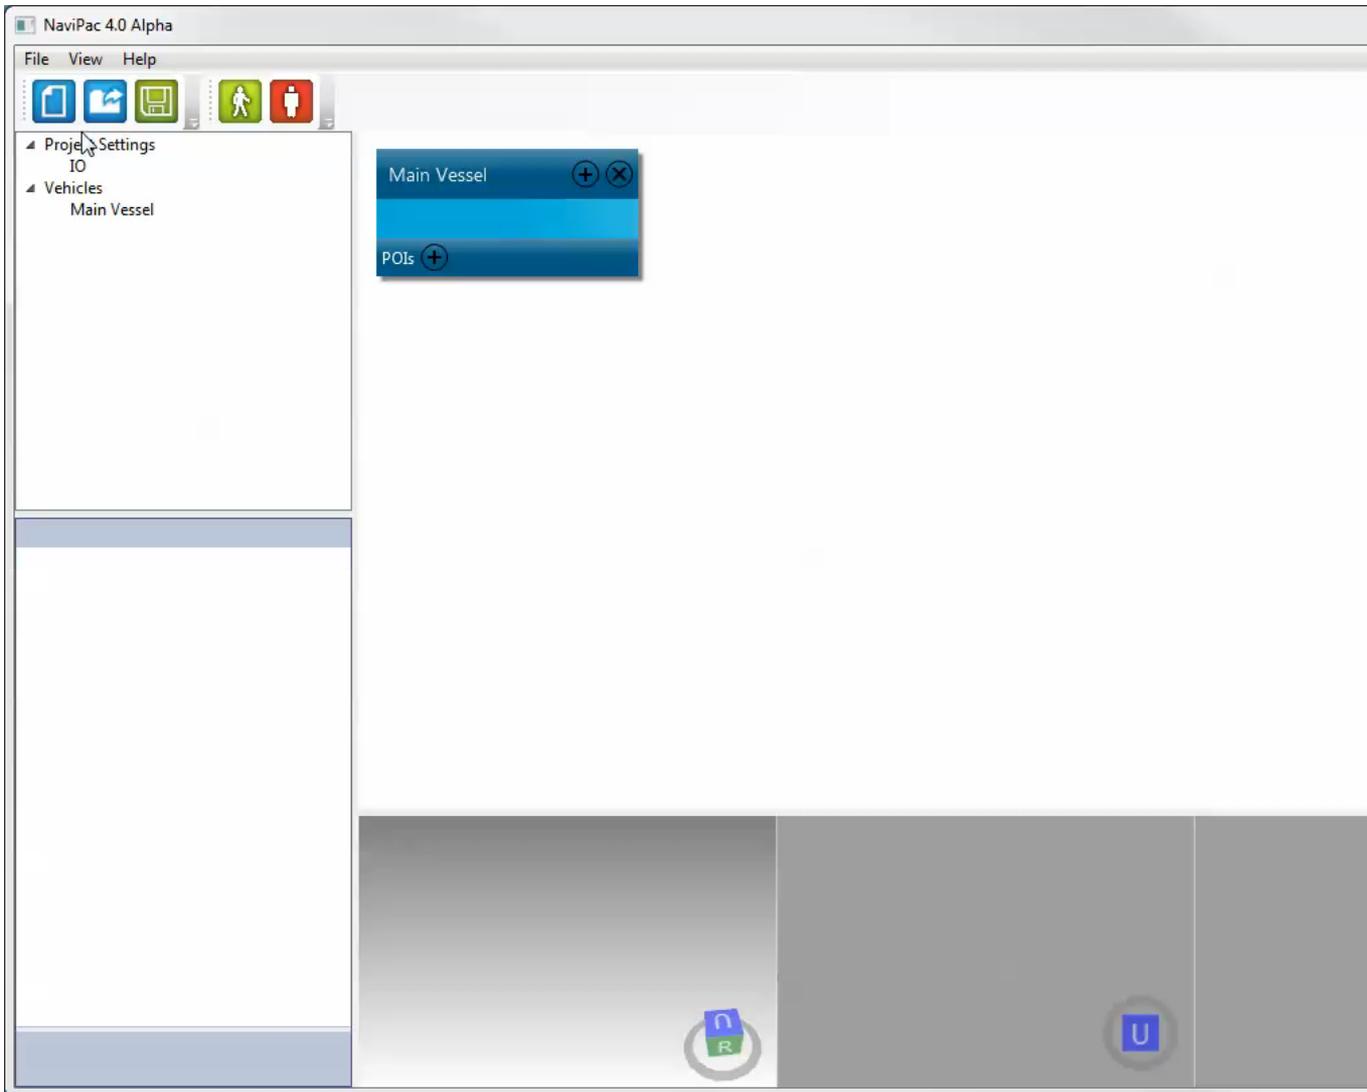

Configuration made simple

NaviPac 4

ROV and underwater position

- NaviPac 3 handles multi vessel, multi ROV operations in a powerfull operation – but we want to **Simplify** the operation
- NaviPac 3 handles the main vessel significantly differently (more advanced) than remote and underwater objects
 - This is based on history – previously, you had much less information from an ROV
 - Today, an ROV is at least as advanced (if not more) as the vessel
- NaviPac 4
 - A logical setup – ‘ROV is a vessel’
 - Algorithmic design of ROV object with multiple inputs
 - Advanced Kalman filter
 - Monitor ROV positioning by having multiple solutions

NaviPac 4 Configuration

- Flexibility – multiple complex, dynamic objects
- Full front page visibility
 - Instruments
 - Vehicles
 - 2D/3D drawings
 - Simplified drawing
- Auto-configuration – automatically look for connected equipment and determine type

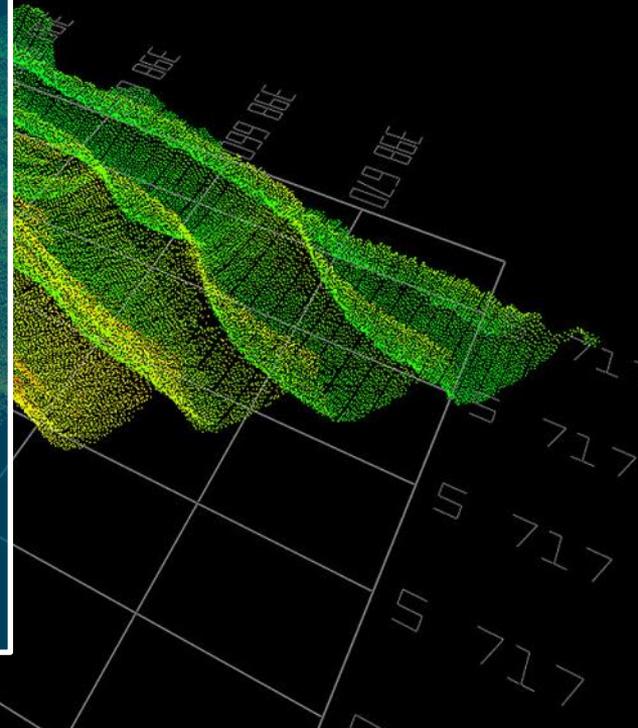

New Helmsman's Display

NaviPac 4

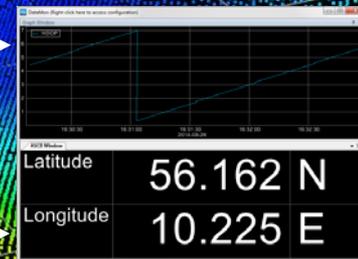

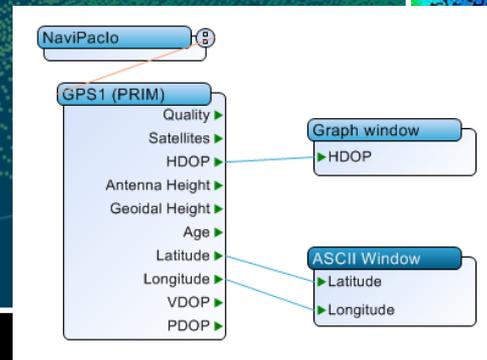

3D Helmsman's Display

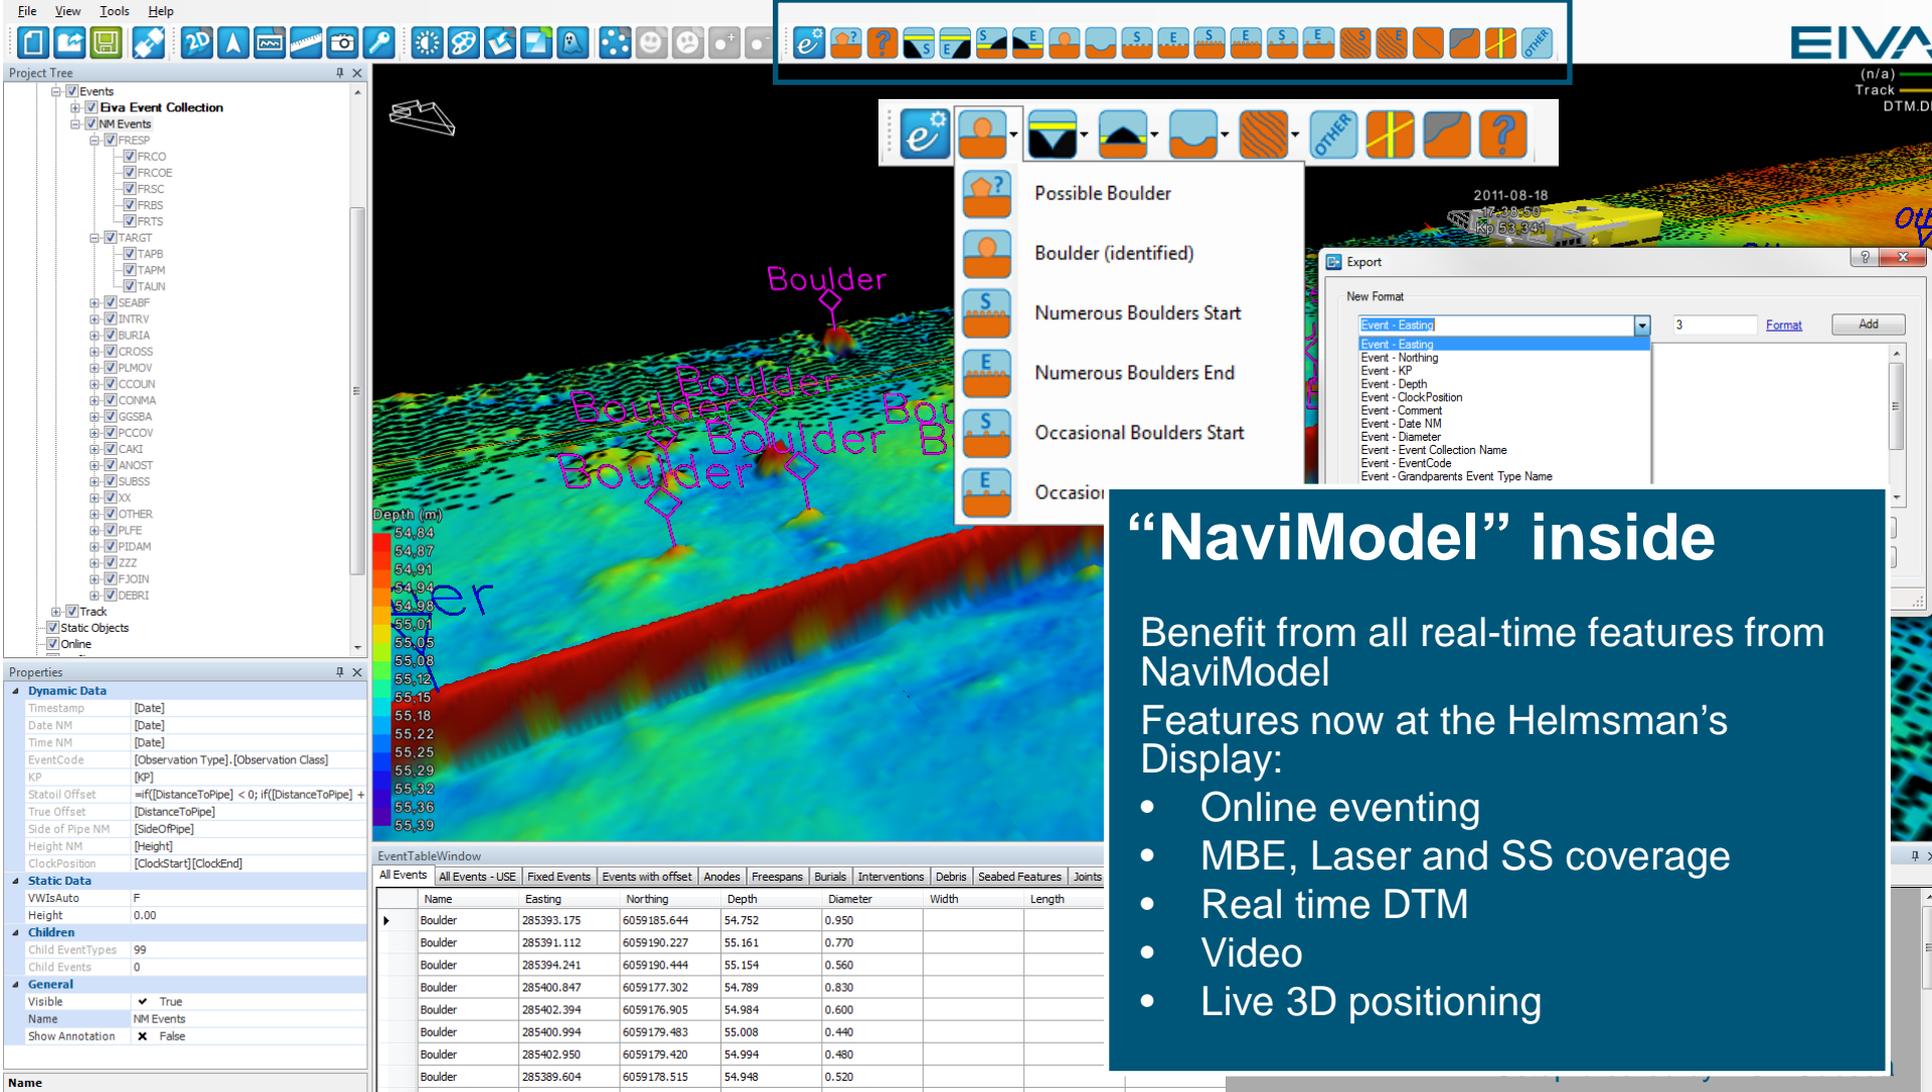

- With NaviPac 4, the **Helmsman's Display** will be natively 3D and 2D
 - All the capabilities of Online 3D – now inside the **Helmsman's Display**
 - Real time 3D positioning
 - Real time DTM generation
 - Real time 3D sensor coverage
 - Multiple 3D & 2D dockable windows
- NaviModel and the **Helmsman's Display** will be based on the same 2D/3D engine, allowing for sharing of functionality

DataMon inside the Helmsman's Display

- **DataMon** introduced a lot of very powerful and easy-to-use tailoring features in NaviPac 3.10 – it turned out that this was a real life saver in many occasions
- In NaviPac 4, we are putting them inside the **Helmsman's Display**
 - More information in one place
 - Configurable contents
 - Graphs, data views, etc
 - Tailoring your own display

“NaviModel” inside

Benefit from all real-time features from NaviModel

Features now at the Helmsman’s Display:

- Online eventing
- MBE, Laser and SS coverage
- Real time DTM
- Video
- Live 3D positioning
